Artificial Intelligence and its pros and cons

a) Introduction

b) Artificial intelligence and modern world overlook

c) Prospects of artificial intelligence in different domains.

  a) Fintech a revolutionary step towards stable economy.
  .: Estimated $51 trillion trade through Artificial economic strategies till 2055.

  b) Modern farming with Artificial intelligence and its tools.
  .: Global food security only maintained through organic and modern farming.

  c) Artificial intelligence in recognizing climate upcoming threats and their mitigation.
  .: Effective pre and post risk management in disasters and environmental issues.

  d) Political structure more effective in delivering manifesto.
  .: Use of artificial intelligence

in organizing compaigns and lowering language barriers.

e) Health initiative through artificial intelligence in disease recognition and diagnosition.

∴ Treatment of cancer through ultra-violet rays and penetration through artificial intelligence.

f) Technological advancement in different corporate sectors by incorporation of artificial intelligence.

∴ Race in attaining world most effective order between Tesla, Ford, and tech based companies.

g) Artificial intelligence ~~make~~ *Has transitioned* world order from bipolarity to multi-polarity.

∴ World power status thrust among USA, China and Russia.

d) Consequences of artificial intelligence in modern world.

a) Artificial intelligence ~~creates~~ *Has already created* jobs and employment displacement.

∴ About 60% of revenue made by artificial intelligence and

40% jobs displacement.
b) Developing countries vulnerability becoming resistent in adapting artificial intelligence.

∴ Structural and policy lapses make developing countries lagging behind in economic race.

c) Misuse of artificial intelligence in deepfake and doctored misinformation.

∴ Social, cultured and political sentiments are most vulnerable to misuse of artificial intelligence.

d) Excessive use of artificial intelligence leads to death of creativity, critical thinking and manpower.

∴ Manpower centred societies changed to machine power and self centred world.

e) Artificial intelligence pave way to technological facilitated gender based violence.

∴ 90% women are facing deepfake and doctored images.

f) Artificial intelligence tilted towards developed nations and cause more accumulation of wealth in few hands.

∴ Developed nation like USA, China and Russia creates more problems for developing countries like climate issue.

e) Conclusion.

Artificial intelligence is a double edge sword in making the developed countries sustainable and developing countries vulnerable to some extent. Artificial intelligence is a growth process from traditional mechanism of doing different jobs by ~~means~~ ~~~~ to modern mechanism of database intelligence in different domains. The modern world is a global village which needs a more adaptable process to gains more benefits. Artificial intelligence is that unique tool for obtaining most advanced form of world. Artificial intelligence have power to make the world socially economically, politically and cultural viable from basic to high revolutionary world, the whole world is standing at the cusp of artificial intelligence to attain strategic benefits.

Artificial intelligence ~~is~~ *Has now become* the life or death situation for worthy states. Along different pros-pects for leveraging world needs, it has consequences for excessive use. Artificial intelligence is like a playing field for socio-economic instability and deepfake technology. In a nutshell, artificial intelligence ~~have~~ *Has* a capacity building in making world susceptible and vulnerable.
