

Pakistan's Climate Odyssey

Proliferation in calamities posed by climate change wrapped and gripped Pakistan in so many daunting challenges, whose need of an urgency to stemmed the threats propagating from climate change. Apparently, change in precipitation pattern, rapid melting of glaciers and rise in temperature are the fifth outcomes of climate change. As a result water scarcity, food insecurity and high risk of ~~glaciers~~ glacial lake outburst floods (GLOFs) are mushrooming. For instance according to the report of National Disaster Management of Pakistan, after the devastating flood of 2020 water level are exceeding extensively. Similarly, the same report depicts that 80% about 1.8 billion of rice were loss. As Pakistan faces myriad of challenges posed by climate change therefore, there is need of an urgency to take pragmatic measures and align the country on the path of sustainable growth.
