- a. Provision of employment opportunities
- b. Increase of financial investment in youth
- c. Introduce modern skills and technical knowledge according to demand of markets
- d. Expand awareness of enterpreneurial businesses.

b. Conclusion

## Neglect of utilization of educated youth in Pakistan

Pakistan currently holds the highest proportion of young people, but they do not play their important roles in development of its economy because of negligence of utilization of these educated youth. The factors like minimum economic opportunities, lack of modern skills, and knowledge of technology becomes the cause of their neglect. However, when the government and all other public institutions will provide them better economic opportunities, skill and technical knowledge, they can change the course of economy into developed economy. Pakistan needs to address this

problem of urgent grounds without doing more delay because when these youngs becomes old they will become burden on the economy.

Reckless of our government and other public institutions have neglect the utilization of educated youth. They are not taking the advantages of educated youth by efficient means. The services of youth can give more advantages when they are efficiently used.

The reason of this neglect is low employment opportunities for educated people. Young people did not get opportunity to provide their services and labor. They did not get work opportunity according to their mental and physical health status. They

are forced to work at small standard. Like the degree holders in different sectors are working in a shops of vegetables, mechanics and construction companies as labors.

They did not get good job opportunities because of lack of financial investments in youth employment of our country. It is a deficiency of our institutions. There are no employment programs on national level for youth. Loans from banks for employment activities is also a complex process because banks demand security for loan and the poor people have nothing to give them as security.

Political instability is a also a major cause of neglect of utilization of educated youth when the government is stable it bring employment programs for people and provide them opportunities but when government is unstable there is no such opportunities for youth ~~but~~ even the ongoing business becomes shut down. Politically stable economy grows and unstable political economy stop growing because opportunities of development reduced. There is deficiency of modern work skill skills that are demand in national and international level. majority of youth ~~to~~ have degrees but the institution do not

teach them skills so that they can do any work for ~~the~~ progress. For example, the students of Artificial Intelligence have degrees but they don't know how to do online works or skills. They have to pay money for learning skills privately. Educational institutions only gave theoretical knowledge. A few of universities have facilities of internship of students to teach them skills. Youth of Pakistan do not have sufficient advance technical knowledge because Pakistan is not technologically developed. They do not know ~~with~~ how to deal with advance technology in different sectors like automobiles etc. People of Pakistan

have a few interest in technology but it is growing with the passage of time.

The other major reason for the neglect of utilization of educated youth is that there is biasness in providing opportunities to youth. People of wealth families get better employment opportunities than poor or middle class families. The "wedra" systems in Sindh and Balochistan is a cause of biasness. Due to biasness the people who have potential to do work ~~in~~ efficiently are not get opportunity of employment, and their potential decreases as time passes.

Lack of interest in entrepreneurship business also affect utilization of educated people. Because

they have capacity to run business but they prefer government and private jobs over personal business. After some times their potentiality and capacity diminishes. They have more interest in government employment because of risk in enterprise businesses. In this way their potentiality decreases when they do not get employment in government and work in small scale companies. Neglect of utilization of educated youth in Pakistan negatively impact the economy as it increase unemployment rate. People ~~do~~ leave their jobs when their potentiality is not efficiently used. In Covid-19 majority of people become unemployed due to economic crisis. The potentiality of workers

decrease and business got shut down.  
 Pakistan's unemployment rate  
 was 6.42% in 2022. It  
 was 4.93% in 2019 as  
 it increase in 2022 due to  
 neglect of utilization of <sup>educated</sup> youth  
 unemployment increases.

Poverty rate also increases  
 due to neglect of utilization  
 of educated youth in  
 Pakistan. Youth did not  
 get better opportunities  
 according to their potential  
 which increase unemployment  
 and indirectly poverty rate  
 in 2023 ~~10.5~~<sup>10.5</sup> million

people go down the poverty  
 line according to report.  
 when there is neglect of  
 utilization of educated  
 youth it increase the  
 suicide rates because  
 youth is depend on their

olders and became burden when they are unable to help them financially they attempt and tried to attempt suicide. They spend money on study but at the end did not get employment opportunities according to their will, they dishearted and lost hope.

The other impact of neglect of utilization of educated youth is that it intensified psychological diseases like, stress and depression etc. Today, majority of youth is facing these problems ~~mostly~~ mostly for same reason. They become the patient of hypertension. According to one report of survey related to stress, "majority of population have stress problem." Their struggle and

hard work become fruitless when their utilization is neglected by different people, government and institutions.

They lose the hope to become successful person.

The major impact of neglect of utilization of educated youth is that it increase crime rates. Because educated people know how to manage simple technologies like CCTV cameras, phones, laptops, it increase crime rate. They do not have other choice because of no provision of economic opportunities according to their will.

It also negatively affect the economic growth rate because of decline in employment rate, increase in poverty rate, low GDP

growth and other decreasing economic factors. The real GDP growth was 0.3%, it reduce the economic activities.

However, when we address this problem of neglect of utilization of educated youth by providing them more economic opportunities according to their interests or ~~of~~ potential. It will reduce unemployment rate by increasing employment opportunities.

Moreover, increase of financial investment in youth can also reduce this problem. Government can introduce new programs for youth and can give them easy loans without strict policies. It can make such policies which increase employment rate.

Furthermore, the introduction of modern skills and technical knowledge according to demand of ~~now~~ national and international markets is also important. Government should make such public policies to teach youth skill that they can sell in market and do progress. Government should also expand or spread awareness about the entrepreneurship business to promote economic growth and potential of youth. They should give them economic opportunities to support their families and country.

Hence, we concluded that the neglect of utilization of educated youth in Pakistan is caused by many factors

like, low employment opportunities, absence of financial investment and deficiency of modern skills or technological knowledge and they have ~~very~~ negative side effect on the growth of economy, employment rate and crime rate. But, we can reduce these effects by introducing new skills, technology, employment opportunities and by awareness of entrepreneurship businesses.
