# Unethical Use of Artificial Intelligence tools in education and its Consequences

**Thesis Statement:** Artificial intelligence has the potential to revolutionize the human world but alarms over its unethical use has also been growing. Its unchecked use in education can bring profound consequences to society and humanity. To avoid such consequences, correct guidelines and regulations are required.

## Outline:

- I. Introduction
- II. Unchecked use of Artificial Intelligence:  
An Overview
- III. Unethical Use of Artificial Intelligence tools in education:
  - A. Students use AI tools to complete their assigned tasks which make them prone to cheating habits.
  - B. Copy-paste the available data on

AI driven apps produce plagiarised work.

D. Personal information of students and teachers available on Chatbots can be misused against them.

D. AI system may trained on biased data which can be used to target certain group.

E. Access to AI-based educational resources may replace human teachers.

F. The data available on AI chatbots may not equipped with latest developments which may reduce quality of education.

IV. Consequences of Unethical Use of AI tools in education:

A. Chances of failure of students may increase.

B. Trust Deficit can hamper student-teacher relations.

C. Lack of Creativity may prevail in students.

D. Chances of discriminatory treatment of students and certain groups may increase.

E. Privacy and security of students and teachers are at risk.

F. Overdependence on AI results in laziness on both student and teacher side.

II. Some suggested measure to ensure effective use of AI in education:

A. Equip stakeholders with the skills and knowledge to use AI tools ethically.

B. AI regulatory laws are required to be enacted.

C. The development and implementation of relevant educational policies to address the issue, is required.

VI. Conclusion.
