

# AI can be the Savior of Human Race

## Outline

### 1- Introduction

Thesis statement: Artificial intelligence can be the savior of human race. It can update and upgrade human race. It has potential threats too but if these threats are addressed, it can revolutionized human race.

### 2- Defining the term AI and its potential uses

### 3- AI can be the savior of human Race (Thesis)

a) Health care advancement to diagnose diseases in early stage and its prevention

b) Early prediction of natural disasters

c) AI in agriculture to track the progress of crop over entire crop cycle.

d) It can facilitate crime detection

e) Automated systems improve work efficiency across various industries and sectors

### 4- AI can not be the savior of human race (Antithesis)

a) Development and deployment of automated weapons can destroy mankind

b) Biased algorithms <sup>can</sup> lead to false predictions

c) Cyber security attacks on automated farming systems

d) AI can surpass human intelligence, become uncontrollable or act against human interests.

e) Automation of jobs <sup>can</sup> lead to unemployment in various sectors

### 5- AI is neither hero nor villain, its harms and benefits depends upon how human use it (Synthesis)

a) Automated weapons can save human lives. They must be deployed only for security purpose

b) Biased algorithms can be fixed to cater false prediction.

- c) Precision farming is transformative approach that enhance efficiency and effectiveness of various agricultural operations, reduce associated risks
- d) Technology can never control human
- e) AI can reduce work load and create potential jobs.

## 6- Conclusion

### AI can be the Savior of Human Race

The origin of the term "Artificial Intelligence (AI)" can be traced back to 1955 but the concept of Robotics and AI became prominent in 2010, evolving from the realm of science fiction and academic field into a practical reality of modern times. The use of artificial intelligence dramatically increased in modern world. AI can be the savior of human race. Both public and private sectors are using AI in various field. It can be the savior in health by diagnosing diseases at initial stage and recommending measures to prevent their progression. It helps to mitigate climate change and early prediction of disasters. In education sector it can be the savior as it helps to access the data within seconds. Moreover, it can facilitate crime detection and help to maintain law enforcement in country. Automated systems improve work efficiency across various sectors. Apart from its countless benefits, it has potential to harm mankind. Development and deployment of automated weapons is harmful. The biased algorithms can lead to false predictions which can create mistrust among public. It is predicted that AI can surpass human intelligence and become uncontrollable. It can be used against the interest of

humans. AI can lead to unemployment in various  
ways. This increase poverty and inflation. Although  
has potential to destroy human race but it can  
be the saviour, if it is used in ethical limits and  
the betterment of mankind. If the threats of AI  
are addressed properly, it can revolutionized human race.
