Artificial Intelligence can be the savior of human race.

Outline

Introduction

Thesis statement: Undeniably, Artificial Intelligence (AI) can be the savior of human race. There is another school of thought who believes otherwise; however, the given evidences are not substantive. Therefore, it is beyond any doubt that AI can be the savior of human race.

A glance at the global advancement of AI

Artificial Intelligence can be the savior of human race.

Signature of Internal Examiner

a) Artificial Intelligence can effectively treat diseases

Signature of External Examiner

b) Artificial Intelligence helps in climate sustainability

- c) Artificial Intelligence has encouraged security mechanism
- d) Artificial Intelligence helps students in their education
- e) Judicial system by artificial intelligence has promoted speedy justice

4- Artificial Intelligence can not be the savior of human race.

- a) Artificial Intelligence in healthcare system is very expensive
- b) Dependency on artificial intelligence in climate also contributes to pollution
- c) Artificial Intelligence itself is a threat to the world peace
- d) Artificial Intelligence curbs students' creativity
- e) Artificial Intelligence replaces manual intellect

5- Artificial Intelligence can be the real savior of human race.

- a) Artificial Intelligence has diagnosis various diseases
- b) Artificial Intelligence technology has reduced climate threats
- c) Landmark conferences on AI has ensured the world's peace and security

START FROM HERE

d) Positive AI usage has promoted educational sector

e) The world has adopted AI in speedy justice

6- Conclusion

Essay:

"In a globalized world, the world is readily adopting artificial intelligence technology to ensure profits for human race." (The New York Times, The World is Flat, 2022). This statement highlights the role of artificial intelligence in benefits of human beings. Undeniably, artificial intelligence (AI) can be the savior of human race. There is another school of thought who believes otherwise; however, the given evidences are not substantive. Therefore, it is beyond any doubt that artificial intelligence can be the savior of human race. Role of artificial intelligence such as, effectively treatment of diseases, climate sustainability, and strong security mechanism are proven facts. Further, students' facilitation in their education, and judicial reforms are other evidences. However, another school of thought disagreed to it giving evidences, including costly treatment, pollution contribution, and insecurity trends etc. But these are not substantive examples, which highlights AI as a savior of human race. Diseases diagnosis, climate ectast

rophe reduction, and AI-led safety conferences strongly advocates the savior of human race. Therefore, artificial intelligence can be the great savior of human race.

Global advancement of artificial intelligence is very clear in a globalized world order. In fact, artificial intelligence progress is increasing day by day in the international community. The global powers play a very crucial role in advancement of AI. According to the report by FOX News, "US-Sind competition promotes the world of Artificial Intelligence, which will increase competition in global market." (Fox News, AI-led world, 2022). This indicates that global advancement of artificial intelligence is growing in a globalized world.

Signature of External Examiner

Among the savior of human race, Artificial Intelligence (AI) treatment of diseases is on the top of the list. Artificial intelligence treat various diseases, which serve as the savior. In Pakistan, health-care system also get reforms by AI-usage in order to save humanity. "Sindh Institute of technology has successfully promoted artificial kidney treatment in hospitals of Karachi" (Pakistan Legislative and Development Report, 2023). This serves as a clear demonstration that effectively treatment of diseases by artificial intelligence can be the savior of human race.

Further, artificial intelligence helps in climate sustainability, which also support the savior of human race. Modern artificial intelligence plays a very crucial role in determining climate patterns. Resultantly, the advanced artificial intelligence has become a root of climate resilient environment. According to the research by Pew Centre, "About 69 pc of American believes in AI usage as a powerful role in climate

sustainability." (Pew Research Centre, 2022).

Thus, artificial intelligence role in climate sustainability also serves as the savior of human race.

Furthermore, artificial intelligence has encouraged security mechanism indicating AI can be the savior of human race. No doubt, artificial intelligence ensures the world security, stability, and peace order of the world. AI-led surveillances and reconnaissances show that the world seeks security by artificial intelligence technology. "Approximately 72% of Americans, and 59% of Europeans promote AI-technology drones, cameras, and satellites for surveillances to maintain security order." (The BBC, AI-led technology, 2023). Hence, encouragement of security by AI can be the savior of human race.

Moreover, artificial intelligence helps students in their education, which expresses AI as the savior of human race. Artificial intelligence advancement has facilitated students' studies. In consequence, AI-led Chat GPT

has helped students in fast learning education. According to the survey by Pew Research centre, "About 60% of students in Pakistan believes in chat GPT as a barrier of students in their education." (Pew Research Centre, Advanced Chat GPT in education, 2023). This statement highlights artificial intelligence role in students' education, which advocates AI as the savior of human race.

Similarly, judicial system by AI has promoted speedy justice, directing the savior of human race. Undeniably, artificial intelligence has helped the world in strong justice system. Almost the world has adopted role of AI in promoting speedy verdict serving the humanity. According to Justice Munir, "Artificial Intelligence usage in juvenile courts increases public trust by providing speedy and fair just." (Justice Munir of Juvenile Court, Behawalpur, 2023). This again indicates that judicial system by AI has promoted speedy justice, which shows that

artificial intelligence can be the savior
of human race.

However, expensive artificial intelligence in healthcare system indicates that AI can not be the savior of human race. In fact, technology has become costly to adopt in healthcare system, which creates unequal world order. The developing world needs to struggle to adopt AI as compared to developed world. "The advanced technology has already divided world in unequal poles of global North and global South." (NWN.ctr.org, 2022). Thereby, expensive artificial intelligence in healthcare system indicates that AI can not be the savior of human race.

In the same manner, depe-

Signature of External Examiner

dependency on artificial intelligence on climate also contributes to pollution. The modern artificial intelligence as a fixed technology prevails out-dated patterns contributing to climate vulnerability. Fixed artificial intelligence can not meet with new, modern climate risks promoting climate pollution. "About 19pc of Americans believes in AI-led climate pollution accusing of out-dated frameworks." (Gortner, An analyst, 2023). This indicates that dependency on AI on climate also contributes to pollution indicating that AI can not be the savior of human race.

Additionally, artificial intelligence itself is a threat to the world peace, which also indicates that AI can not be the savior of human race. In a advanced world, countries blame artificial intelligence as promoting world insecurity. Consequently, the world countries have banned artificial intelligence led chat GPT for claiming world peace. "Approximately 7 countries of Europe have banned chat GPT

accusing of cyber impeachment." (The New, Chat-GPT risks, 2023). This serves as a demonstration that artificial intelligence itself is a threat to the world peace, indicating AI can not be the savior of human race.

Along with above, artificial intelligence curbs students' creativity again advocating AI can not be the savior of human race. Students' reliance on artificial intelligence-Chat GPT poses risks to their creative learning. Not only this, but dependency on AI also decreases students' interests in their education. According to Allama Iqbal, "Na Tou Zameen Kelye Hai, Na Aasmaan Kelye; Jehan hai tere lye, tou Nashi Jehan Kelye." (Allama Iqbal, A Great poet and philosopher). Thus, artificial intelligence curbing students' creativity indicates that AI can not be the savior of human race.

Furthermore, artificial intelligence also replaces manual intellect, which highlights that AI can not be the savior of human race. Involvement of AI in justice

system decreases need of manual participation. This shows a huge risk to mankind in the age of technology. "Growing AI-dependency soon will take position of a man as technology development did with pigeons in the past" (Taqeer Hussain, AI-Generative, 2023). Thereby, artificial intelligence replaces manual work, which shows that AI can not be the savior of human race.

Besides above strong evidence substantive the AI can be the savior of human race as it diagnoses several diseases. Modern artificial intelligence has protected mankind by diagnosing serious diseases. This shows that AI definitely serves humanity as it has highlighted serious pandemic diseases diagnosis. "The global COVID-19 pandemic treatment is a great success of AI serving the humanity." (The CNN, COVID-19 Pandemic and AI, 2020) Thus, artificial intelligence has diagnosed various diseases indicating AI can be the savior of human race.

In addition, artificial intelligence technology has reduced climate threats, which also serves as the part of savior of human race. Modern artificial intelligence helps in understanding weather patterns to curb climate vulnerability. The global superpowers generate technology artificial intelligence to respond disasters risks. According to the report by the World Bank, "Modern Artificial intelligence can improve air quality by 80pc till 2040." (The World Bank, Sustainability of Environment, 2023). Hence, artificial intelligence technology contributes to climate sustainability, indicating AI can be the savior of human race.

Moreover, landmark conferences on artificial intelligence has endorsed the world's peace and security as

Signature of Internal Examiner

Signature of External Examiner

the savior of human race. Undoubtedly, the world is conscious about peace and order for the future sustainability in development of artificial intelligence. This pressurized the world to call a global conference on the safety of artificial intelligence usage. "European Union led the world's first AI-led safety conference to ensure safe AI-usage." (The Economist, The world of union, 2023). Hence, landmark conference on AI has ensured the world's peace and security, which can be the savior of human race.

Similarly, positive AI usage has promoted educational sector, showing AI can be the savior of human race. Chat GPT facilitation has helped students in the right direction to access to quality of education. With the intellect of Chat GPT, students can move ahead to explore the research in their studies. "Positive initiatives by AI in studies has directed students to read quality of books, to explore websites, and to learn new

trends of studies." (The News - AI and education, 2023). This indicates that positive AI usage has promoted educational sector, indicating AI can be the savior of human race.

Lastly, the world has adopted AI in speedy justice, supporting AI can be the savior of human race. The world needs to promote speedy just, which has strongly supported by artificial intelligence. The judicial systems of developed world work under artificial intelligence to win public trust. "Approximately 70% of people believe in AI-led justice system." (Al-Jazeera, Judicial Reformation, 2022). Thereby, worldly adoption of AI in speedy justice system advocates AI can be the savior of human race.

In conclusion, artificial intelligence can be the savior of human race. Several evidences also support this statement, including effective treatment of diseases, climate sustainability, and security of the world. Along with these, students' education development, and speedy just are other evidences. But, another

school of thought believes otherwise, however the given evidences are not substantive. These include, costly artificial intelligence treatment, AI-dependency contribution to pollution, and insecurity of the world etc. Beyond these, artificial intelligence serves the humanity at the larger extent. Diagnosis of various diseases, reduction of climate threats, and landmark AI-centered uses for security mechanism are chief examples of it. Therefore, it is beyond any doubt that AI can be the savior of human race. "The advanced artificial intelligence (AI) based technology serves the humanity in the 21st century." (The New York Times, 2023).
