

My Journey with online learning during the Pandemic:

⇒ During Pandemic, all world was effected. Mostly, underdeveloped country which ~~based~~ dependent on such as agriculture sector, business, industries ~~and~~ etc was stopped. More people was unemployment. especially education system was very effected. The government putted one year lockdown. as well as people lassed life.

In covid-19 all world faced critical situation. During Pandemic, my education journey was not good. universities, colleges only complete formality. suddenly, this institution started online classes. it was not good for students. The students ~~are~~ not understood online classes and backward area students was big issues of internet. Teachers and students was ~~not~~ unaware about technological system. In covid-19 learning was not concept only struggled for ~~it~~ complete formality. ~~but~~ because they do not understood it. Even more students not taken classes due to unaware online system and some network issue. So, the government ~~should~~ should that first of all given training about online system. A big issue was teachers give assignment to students.

Some students misbehave from teachers. Education as well as economy system was more affected due to unemployment. when reproduction was less so automatically economy system was less. Economy and education are ~~very~~ ~~more~~ interlinked. So, the education system was not good in pandemic. Resulted, ~~my~~ my journey with online learning during the pandemic.

"The most complete gift of God is a life based on knowledge"
