

Essay: Artificial intelligence can be the savior of human race.

## Outline

- 1 Introduction
- 2 Brief overview of Artificial intelligence
- 3 How Artificial intelligence can be savior of human race
  - 3.1) Enhance Job opportunities for Peoples
  - 3.2) AI Strengthens democracy
  - 3.3) Increase safety & security
  - 3.4) Promoting global economy
  - 3.5) helping in the field of education
- 4 How AI can be dangerous for human race
  - 4.1) Leading to unemployment
  - 4.2) Threat to democracy
  - 4.3) Accelerating hacking and terrorism
  - 4.4) Liability: Who is responsible to damage caused by artificial intelligence

4.5) Hinder students critical thinking and Problem solving skills.

5 Artificial intelligence can be more beneficial to human race

5.1) some jobs won't be replaced yet

5.2) AI threat to democracy is easily mitigated.

5.3) Hacking and terrorism activities are handled by humans.

5.4) Underscoring need for regulations to mitigate the damage

5.5) AI enhance academic performance by providing personalized support to students.

6 Conclusion.

Artificial intelligence can be savior to human race because it has many positive impacts on it. it helps on different area of human life. it enhance

Job opportunities for many people as well as artificial intelligence strengthen the democracy. Not only democracy but also it increases the safety and security of human race because now they have proper system to save themselves. Artificial intelligence also promoting global economy of world in different ways. It is also many positive impacts on education. But artificial intelligence can be caused some negative impacts as well, because it also leading to unemployment and threatening to democracy. It can be also accelerating hacking and terrorism activities in different areas. On the other hand it is also necessary to know that who ~~can~~<sup>is</sup> responsible to damage which is caused by artificial intelligence and it is also reducing the critical thinking of student as well. Because they used AI instead of studying. But these things will be mitigated

because there are many other ways to handle the negative impact. There are many other jobs opportunities also available for people and its threat to democracy is also easily mitigated. Moreover, hacking and terrorism activities are handled by human so humans are responsible of it. These areas can be mitigated by regulations. The education sector also will increase its growth so ~~the~~ artificial intelligence can be more savior to human race. It helps in all walk of life.

Artificial intelligence is widely acknowledged to be one of the most dramatic technological game changers of our age. It is stream of study that involves the creation of advanced algorithms that can be mimic the human brain. The pioneer of AI John McCarthy defines it as the science and engineering of making intelligent machines

AI not only overshadows the death of the traditional basis of power but also functions as well a foundational cornerstone for the new world order.

Artificial intelligence changed job opportunities for people, it gives them many different ways to perform in their field. It create new employment opportunities in unemployed areas. For example, the automation of repetitive task the emergence of new sectors and the demand for AI related skills are creating a need for new jobs.

Moreover, Artificial intelligence strengthen democracy as well. Rapid advancements in artificial intelligence technologies have the potential to transform democratic governance and its execution. AI could also assist elections officials and workers in their critical efforts to oversee

polls, whether, around the world.

So it is very helpful in democracy. As a technologies evolves, policy, - makers, advocates and citizens will need to keep up ensure AI is leveraged as a force for a better and more inclusive democracy.

Furthermore, Artificial intelligence also enhance security and safety of people. It is used in criminal Justice system in many matters.

AI could be used for defence and attack strategies. India is using AI in their defence system.

So it can also used for security and safety purpose.

In addition, Artificial intelligence also enhanced global economy.

The impact of AI on global economy is already noticeable. According

to a report by McKinsey global institute, the development of AI may increase the global economy GDP by 2% per annum by 2030. which correspond to

approx 16 trillion dollar. Hence it is proved that global economy is also increased due to artificial intelligence.

Moreover, artificial intelligence helping in the field of education. In the field of education, AI has potential to revolutionize learning experience. AI can improve teaching and learning in early childhood education. According to the report of Education Department the AI chatbots decrease the anxiety level of the students by 20% and enhance their grade by 30%.

However Artificial intelligence can be dangerous for human race as well, because it leading to unemployment. Use of AI in workplace is expected to result in elimination of large numbers of jobs. It can also increase competition between people so it lead to unemployment.

So AI is dangerous for human race. AI is evolving to target some office jobs. According to Goldman Sachs report March 2023 that AI capable of content generation could do a quarters of all the work currently done by human - equating to 300 million jobs lost across Europe and US. Hence artificial intelligence is threat to human race.

Furthermore, Artificial intelligence is threat to democracy. because AI has already blamed gov creating online echo chambers based on a person previous behaviour displaying only content a person would like, it can also used to create extremely realistic fake videos, audio, images known as deep fakes. so it is also threat to democracy.

Moreover, Artificial intelligence also increase the risk of hacking and terrorism.

According to governments, "Safety Risk Report" safety and security risk of generative artificial intelligence to 2025, that it enhanced terrorism capabilities in Propoganda, weapons, development, and attack planning. It also increased child sexual abuse images Plan, and carry out cyber attacks. hence Artificial intelligence cause negative impacts on human safety and security.

In addition, it is also liability that who is responsible to damage caused by artificial intelligence. An important challenge is to determine who is responsible to damage caused by AI operated devices. the result of that AI produce depends on how it is designed and what data it used. both data can be intentionally and unintentionally biased so it is also challenge for world. Furthermore, it is also

hinder students critical thinking and problem solving skills. While AI offers many benefits in education but it has also downside. Some students may become, "Thought solving leaguers" who rely on a AI provide answers without thinking for themselves. This behavior can hinder their ability to reflect, express and construct their own thoughts and sentences. So it is also caused negative impact on students.

On the other hand, artificial intelligence can be more beneficial to human race in many ways. Some jobs won't be replaced yet. For all the fear, there are many roles and tasks that AI won't be capable of performing in the near future. That's particularly the case with jobs that demand soft skills such as emotional

intelligence and outside the box thinking. Alongside much fear and uncertainty there is optimism. So it can be used as a tool gov help.

Moreover, Artificial intelligence threat to democracy is also easily mitigated. To avoid the bad one to mitigate the problems related to democracy. It need to stimulate people to empathize towards others. It support electoral and deliberative security and promoting fair election. It is need to certain provision on limit possibilities that AI misused to damage and disrupt democracy.

Furthermore hacking and terrorism activities are handled by humans. The key is deciding how to apply AI in ethical manner. AI is essential gov countries and it is also very helpful in security and defence system.

so it can be mitigated by Policy regulations. ~~AI~~ Summit 2023 the world's first safety summit. The world's first AI safety summit concluded at Britain where representative of 28 countries across the globe were present. The most concrete result to come out of the summit was the announcement of plans for the UK and US to set up national AI safety institutes, so it can be easily mitigated.

Moreover it is also need to underscoring regulations to mitigate the damage. It is a need of regulations who believes AI is essential for countries looking to innovate and keep up with the rest of the world. It is also need to make part of discussion and Policy making.

In addition, Artificial intelligence also enhanced

academic performance by providing personalized support to students. They can enhance their skills by using chat, GPT and other apps. These applications gives them direction and guide them to increase their skills in different ways.

AI can assist students in monitoring their progress and identifying their areas of improvement, allowing them to focus on their weakness. It can aid them in creating customized study plans and recommending appropriate learning materials based on their learning style. Hence, it helps students to enhance their skills.

In a nutshell, it is proved that, Artificial intelligence is a savior of human race. It gives them many benefits in walk of life such as job opportunities, strengthen democracy

safety & security as well as promoting global economy. on the other hand, AI has also some negative uses but they can be easily mitigated. experts recommend that rather than worry about threats of AI, it is more useful to think of it as a tool.

The best tactic → Adapt, Learn and lean into the technology.
