

Agriculture in Pakistan

The country which is blessed of four seasons, unlimited water and thousand production of crops is now facing severe hot and cold weather, water scarcity and food insecurity. According to FAO report, Pakistan's agriculture sector have been stagnant after the devastating flood of 2016 and 2022. Similarly, climate change and global warming also jolting agriculture sector. Furthermore, the recent monsoon period is also lethal for crops production and seed germination. Therefore, Pakistan should take pragmatic measure to combat issues like global warming, water scarcity and post-harvest losses and lead the Pakistan's agriculture sector to a sustainable growth.
