

Topic: Artificial Intelligence, its promises and perils

Outline

1- Introduction

Thesis Statement: Artificial intelligence is the torchbearer of industrial revolution 4.0. It has revolutionized the way, people used to look at technology. Like any other human invention, artificial intelligence has its own promises and perils. However, with proper attention in law making and regulations regarding AI, its perils can be mitigated.

2- How artificial intelligence can be helpful and disastrous at the same time?

3- Artificial intelligence and its promising side

a) Reduction in human error

b) Reduced risks to human life

- c) Uninterrupted availability
- d) Healthcare advancements
- e) Revolutionizing the field of Education
- f) Unbiased decision making

4- Artificial Intelligence and its fails

- a) Job losses due to AI automation
- b) Deepfakes may act as an active agent of fifth generation warfare
- c) Social surveillance with AI technology
- d) Lack of accountability
- e) Emotionless
- f) AI arms race
- g) Weakening ethics and goodwill

5- How to stop Artificial Intelligence from becoming a monster?

- a) AI regulations
- b) Ensuring transparency
- c) Robust safety measures
- d) Train AI to get rid of algorithmic bias

6- Conclusion
