

Climate Change awareness: more important than action

Outline

1- Introduction

Thesis statement: Undenably, climate change awareness is more important than action. Global institutions on climate awareness, public awareness on fossil fuel catastrophe, clean energy importance etc are few among evidences. However, some rational steps will promote sustainable environmental stewardship for future prosperity.

2- A glance at current scenario of climate change

3- Manifestation of global politics on climate change

- a) Net zero myth by the Global North
- b) Continuous emission of green house gases (GHGs)
- c) Reliance on fossil fuels for energy production
- d) Inefficiency of climate related financial commitments
- e) Frequent change in global politics on climate action

4- Awareness about climate change is more important than action

- a) Strengthening role of global institutions to promote climate awareness globally

START FORM HERE

- b) Public awareness about fossil fuels catastrophe
- c) Advocate collaborative governance giving awareness of clean environment
- d) Positive role of media for natural protection of habitat
- e) Co-operation on climate resilience knowledge to avoid disasters
- f) Increase importance of green environment by forestation
- g) Promote quality of education including 'climate awareness' lessons
- h) The youths union about awareness campaign on climate change

5- Proactive strategies to protect climate for sustainable future

- a) Effective implementation of climate policies
- b) Invest in renewable energy resources for energy generation
- c) Fulfill financial commitment on climate reduction
- d) Discourage unsustainable urbanization

6- Conclusion

Attention Grabber:

"The global temperature may rise approximately 2.2 or 3 degree centigrade by 2100 century (The International Panel on Climate Change (IPCC), 2022)."

Why the global temperature has crossed its limits? This shows that awareness about climate change is more important than action.

Strengthening role of global institutions to promote climate awareness globally

Undenably, climate change awareness is more important than climate action, in which role of global institutions in promoting climate awareness globally is on the top of the list. Strong role of global institutions can aware the globe on climate sustainability. This has a specific influence on mindsets of global leaders as to adopt a speedy awareness campaign in their governance. According to the report by the United Nations in 2023, "The world temperature has reached a 1.09 degree centigrade, which is alarming situation." (The United Nations, 2023). This indicates that strong role of global institutions in promoting climate awareness globally advocates climate awareness rather than action.
