- Deficiency may cause depression, weakness.
- Fats are essential for organs (internal) protection, over all important for well-being.

(B) 5 uses of Vitamin B-complex, Vitamin E and D, Iron.

Ans: Uses of Vitamin B-Complex; Vitamin

(1) B₁: It is essential for the digestion of carbohydrates.
↳ (Thiamine)

(2) B₂: Essential for the digestion of proteins.
↳ (Riboflavin)

B₃: Helpful in metabolism.

B₆: Important for CNS and digestion.

B₅: Essential for the nucleic acid.

B₈: Important for nails, skin and hair growth.
↳ (Biotin)

B₉: Essential for blood formation.
↳ (Folic acid)

(2) Uses of Vitamin E :-

Vitamin E is essential for the fertility, sexual health, heals

(3) Uses of Vitamin D :-

It is important for the bones and teeth.

(4) Uses of Iron :-

Iron is essential for the RBCs or blood formation.

(C) Five methods of food preservation.

Ans: Food preservation is a method to prevent food spoilage. Several methods have been used since ancient times.
