

English Essay

Topic:-

Artificial Intelligence has overstepped its bounds.

OUTLINE

1. Introduction

Thesis Statement: The boundaries are crossed by the artificial intelligence. The artificial intelligence has worked effectively and within its bounds. There is always positive and negative aspect of thing but it is all about how we consider.

2. Crunch Paragraph.

3. Artificial Intelligence worked within its boundaries.

- a). Workload of people is decreased.
- b). Efficiency of work is increased.
- c). No threat to human jobs.
- d). Chatgpt made the work easy to collect data.

e). Growth of country will flourish.

f). Education become easier.

4. Artificial Intelligence has effected the life style circle.

a). People will become more lazy

b). Man has clever ideas to accomplish the work.

~~a)~~ Ratio of jobless people will ~~increase~~

~~b)~~ c). There is threat to human jobs

d). Chatgpt is also used negatively

~~e)~~ e). machine can't overtake the place of people

~~f)~~ f). Quality of education will be impacted.

5. Artificial Intelligence worked in more productive way.

a). Decreased in workload will also increase the efficiency of person.

b). Man has clever ideas but precise and accurate work done through AI

c). Artificial intelligence can't replace human beings

d). Everything has pros and cons but it depend on person

e). Working of AI will increase the GDP of country.

f) - Easy access and precise knowledge is ~~set~~ gained.

6. Conclusion.

"77% of business owners in world are thinking to include the artificial intelligence in their business". The importance of the artificial intelligence is increasing day by day. But it is thought that the boundaries are crossed by artificial intelligence. The artificial intelligence has worked effectively and within its boundaries. There is always positive and negative aspect of thing but it is all about how we consider. The artificial intelligence has worked in well-mannered way and provided help to human beings by decreasing workload, increasing efficiency, easily collecting data and educating them. ~~and~~ The country will also travel on

progressive path. But it is also considered that it effected the circle of life by providing more ease and effecting quality of education. The machine can't overtake the human being but it is considered as human job industry. Nevertheless, there are different school of thoughts but artificial intelligence has worked in more effective way by easing the work of people and efficiently accomplish them. Artificial intelligence can't replace human being but these are pros and cons of everything.

"32.9% of the companies have replaced the human being job with artificial intelligence technology." It is considered as a threat that artificial intelligence has breached the boundaries and crossed its limit. But most of the people consider it as

2

blessing because it bring peace in life of human being but doing most of its jobs. It has increased the productivity of work but these are advantage and disadvantages of artificial intelligence. The advantages have overstepped the disadvantages.

The workload of people is decreased by using artificial intelligence. It has done the task of man within minutes and done well. Due to his help, the burden on the shoulder of man has become minimum. But the man is always needed to supervise its work, we can't rely on working of machine only. "Amazon which is considered as one of the biggest firm has replaced the maximum working of warehouses, by AI trained robots."

The efficiency of work is also increased through artificial intelligence. The man who did the work in many hours and also get tired, the artificial intelligence has done its work within seconds. It done work more precisely.

"The chatgpt which is considered as most famous website for answering the question. We just write question of any field or subject, it give solution within seconds."

Artificial intelligence is not considered as threat to job because human being is always needed for jobs working. There are work which can't be done by machine. There is human being needed. The machine always need a supervisor who check its work. So, it is just a myth

that artificial intelligence is threat to job. "In most of the countries, the human being is performing the job. ~~Now~~ Artificial intelligence will replace the human being instead it needs human being to train themselves."

Chatgpt made the work easy to collect the data. It answers to every questions of the human beings. But the source of knowledge of chatgpt is internet. It collects the data and present in more precise way. So, chatgpt has made the life of human being more easier. ~~Then~~ It decreased the burden of the human beings.

"Chatgpt even do the coding of every program which is asked to do. Coding is considered as difficult thing."

Artificial intelligence will increase the growth of the country. This will help to increase the economic growth as well. The salary system will vanish if the departments worked by human beings replaced machines. "The artificial intelligence will increase 26% gross GDP growth of China by 2030."

The education become easier by taking help from AI. It is way of knowledge to seek education. The access to different website like chatgpt which solve the problem within seconds. A person can seek knowledge of different fields and make his personality well groomed. By developing his character. As knowledge flourish the aptitude of the person.

By easing the life of people, they will become more lazy by doing nothing. As most of the work will be done by artificial intelligence trained things. By no working of person will make his mind dull and dull mind starts working in negative way. "Different website and apps trained through artificial intelligence, made the people lazy, they don't think and just search for solution and get their solution."

There is another school of thought that people have more clever ideas than machine to accomplish the work because machine can sometime give errors and show distorted results as well. It is true that the ~~person~~ human being's mind work in better way as compare to

Date: / /

artificial machine. The human being is blessed with such mind that can conquer any thing of the world.

There is threat to human jobs as artificial intelligence is replacing the human beings. As most of the people are using AI for their companies for efficient working and to increase the revenue of company by vanishing the salaries of the person. So, it is fool for thought that artificial intelligence will replace the human beings. "In developed countries, mostly the restaurant has employed robots as waiter. This has decreased the job ratio and increase the efficiency of work."

There is positive and negative aspect of everything. It is said that chatgpt is also used negatively. As the students of school, colleges and universities complete their assignments from chatgpt. If Mphil and P.hd students complete their thesis by using the chatgpt. The thinking power of human beings will be damaged.

Machine can't take the place of people. As the friendly environment, interaction with person to person and other things will be effected if machines are employed. Companies of different ~~peeps~~ fields still prefer human beings to employ for their firms. So, in order to increase the economic growth of country, people will still be needed for

Date: / /

M T W T F S S

different purposes.

Quality of education will be impacted. As people will use online sources instead of books. The source of knowledge of different website is internet. There is data available on internet which is unauthentic. So, this can damage the quality of education as people will make their understanding on the basis of authentic data instead of authorized books. "There are different website where wrong data is feeded like wikipedia. So, the source of Chatgpt is internet, it can give data from unauthentic source."

It is said that people will become lazy. But decrease in workload will increase the efficiency of human being as well.

So, it will be wrong to say that there is negative thing to use artificial intelligence. So, if a thing is used positively, it impacts a lot in knowledge and other aspect of man. "86%.

of people of world use artificial intelligence for their work."

No doubt that a man's mind can work in such way that machine can't work. But AI trained machine can give precise and accurate work. The percentage of error will be minimum. The companies are transforming themselves towards the artificial intelligence to increase the productivity of the companies. But it is time taking process to transform system from person to artificial based company. "The product hunting

in amazon is done by using different ~~product~~ tools. It sort out millions of product within minutes by applying filter."

It is myth that artificial replace the human beings. It will be difficult to do that. as a company can't replace its basic management with artificial intelligence. As different things to ponder for the prospect of the company. This can't be done by using the artificial intelligence. As AI can ease the work of the human being but it can't replace the human being.

"There are different hotels in world where waiters are robot but the upper management is human being."

Date: / /

There are pros and cons of everything in the world. But it all depends how the person use that things. The chatgpt will be have the same working. ~~The~~ It had provided the data not it is on the human being that whether it seek knowledge and clear its concept from chatgpt or it just copy paste the assignment from the website. "In recent years, the internet was also considered as distraction but it totally transformed the world of people who use it positively. Know the biggest market to generate revenue is ~~chatgpt~~ ^{E-commerce} which is run through internet."

It is true that working of AI will increase the GDP of country. Because the biggest market in world is e-commerce which helps

to generate the revenue of the world in huge amount. It will work in companies and the salary system will be vanished. So, it will prosper the growth of the world. "It is expected that 1B \$ revenue will be generated through artificial intelligence within upcoming 2 to 3 years."

Easy access of knowledge will help the human to develop its concept and add valuable knowledge to his personality. The to the point and precise knowledge is gained by using the artificial intelligence. So every thing in world helps alot to person for the personality grooming and character building.

In a nutshell, There are two schools of thought in which one school of thought said that artificial intelligence has overstepped its bounds. But the other school of thought said that artificial intelligence has not ~~bound~~ breached its boundaries instead it has eased the life of human being by decreasing their workload and increasing the efficiency. There are also myths that AI has replaced the human being which is too early to say that. As AI can never replace the human being. Human being can ~~work~~ work without AI but AI can't work without human being.
