Digitalization of Judicial System will surely provide Justice to the people of Pakistan.

- 1- Introduction:
- 2- What does digitalization of Judicial system stand for?
- 3- How digitalization of Judicial system will provide Justice to Pakistan's people?
 - ① Enhancing the efficiency of the judicial system in Pakistan
 - ② Increasing the accessibility of the masses to judicial system
 - ③ Fostering the notion of transparency in the judicial setup
 - ④ Altering the traditional court-rooms systems to online-dispute-resolution
 - ⑤ Emphasizing the data-driven decision making through digitalization
 - ⑥ Improving the access to legal knowledge and information

⑦ Reducing the burden of pending cases in Judiciary ✓

⑧ Helping lawyers and judges to access legal precedents ✓

4- Is it digitalization that provides Justice to Pakistan's people?

① Easy and speedy Justice is the basic fundamental right of the people ✓

② the constitution of the country guarantees impartial justice not digitalization ✓

③ Provision of justice to the people is the duty of state/government ✓

④ the rule of law provides justice to the people ✓

⑤ Access to judicial system or justice without discrimination is the right of the people ✓

⑥ Due process and fair trial is

protected by the government not digitalization

⑦ Provide fair justice to the people is the obligation of judges sitting in the courts.

⑧ Enforcement of legal decisions by government ensures the justice in society not by digitalization.

⑨ Neutral, explicit laws, and cost-effective judicial system ensures the justice to Pakistan's people.

5- However, the digitalization of judicial system can 'only' enhance the process of providing justice to the people of Pakistan.

6- Critical Analysis, of the recent digitalization of judicial system in Pakistan, and its role in enhancing the process of justice.

7- Conclusion

Once the Prophet S.A.W ^{said} says "Allah sends me to ensure justice on the earth." The hadith explores the importance of Justice - as a foundation for any society and state. Moreover, throughout the history, human beings have fought for the justice, to ensure their existence of being in society. Still, in the 21st century, the justice remains a mere dream in various parts of the world. It is saddening, the situations in Pakistan is not different. The quest for speedy and easy justice remains a foremost demand of the people of Pakistan. However, the digitalization of the judicial system is considered to be the cornerstone for the provision of justice to the people of Pakistan. Although, the question arises: does the digitalization of judicial system will solely provide justice? The manifestation of the digitalization in judicial setup includes, enhancing the

accessibility, increasing the proficiency, emphasising the data-driven-decision making, and reducing the burden of pending cases in judiciary of Pakistan. On the contrary, the idea of providing justice to the people lies in the foundation of state and its institutions, not in digitalization of judicial system. For instance, easy and speedy justice is the basic right of the people, the constitution of the country ensures the justice, presence of rule of law provides justice, and the neutral, explicit laws, and most effective judicial system ensures the justice to the people of Pakistan, not the digitalization. Though, the digitalization of judiciary can enhance the process of providing justice, by making it easy for the masses ^{to access justice} and judges to provide justice to them.

No doubt, the digitalization of judicial system of Pakistan enhances the public trust on judiciary and judges from

past few years. The live proceeding of judicial cases on national television is the example. In short, there is a dire need to reform or take some measures on the state level to make the better use of digitalization of judicial system, and ensures an easy, speedy, and impartial justice to Pakistan's people.
