Acting to protect the future generations: climate change is our greatest challenge

## Outline

### 1- Introduction

Thesis statement: Climate change is the greatest challenge to the protection of the future generations. Net zero myth, Green House Gases (GHGs) emissions, and inefficient carbon neutral policies etc are few among evidences. However, some measures will curb climate change for sustainable future generations.

### 2- An overview of the contemporary age of climate change

### 3- Climate change as the greatest challenge to the world

- a) Net zero myth by the Global North
- b) Massive Major emissions of Green House Gases (GHGs)
- c) Inefficiency of carbon neutral policies
- d) Lack of financial commitment on climate resilience
- e) Massive reliance on fossil fuels for energy production
- f) Exploitation of natural environment in developing countries
- g) Extreme rise of global temperature
- h) Frequent change in global politics
- i) Weak co-operation and collaboration on global forestation

#### 4- Implications of climate change on the world

- a) Intensive weather patterns threatening very existence of life on the earth
- b) Unprecedented climate hazards at the global level
- c) Severe food insecurity and mass hunger
- d) Agricultural decline shrinking economic growth

#### 5- Proactive strategies to curb climate change for sustainable future

- a) Invest in renewable energy resources
- b) Discourage fossil fuels dependency at global level
- c) Launch of awareness campaign for climate sustainability
- d) Fulfill financial commitments to balance the natural environment

#### 6- Conclusion

According to the report by IPCC, "There is no room for climate change" (The IPCC, AR6, WG3; 2023). Has climate change threatened the future of the generations? Undenably, growing dilemmas of climate change has posed a serious threat to the future of the generation.

## Discourage fossil fuels dependency at global level

Secondly, the world needs to discourage fossil fuels dependency at global level for sustainable future of the generation. The world has heavily become dependent on fossil fuels, which need discouragement by the whole world. This approach will not only reduce fossil fuel reliance, but will also lead to sustainable future of the world. As per words by Antonio Guterres, "This is the time to phase out fossil fuels for climate sustainability." (Antonio Guterres, the United Nations' Secretary General, 2023). This highlights that discouragement of fossil fuels dependency at global level <sup>that will</sup> lead to the sustainable future of the generation.
