

Humanity's response to climate change is merely rhetoric.

OUTLINE

1. Introduction

Thesis Statement

Humanity's response to climate change is merely rhetoric, as developed countries are involved in power struggle and developing countries are incapable to shift towards renewable energy sources. Its consequences are unbearable on human health, food security, and global economy. By determining sustainable mitigation mechanisms and accountability measures, the response to climate change can be made practical.

2. Climate change has reached its peak apex and ~~human efforts~~

3. Why the response of humanity to climate change is merely rhetoric?

- a. Vested interests of developed countries
