4. ~~Conclusion.~~

a. ~~Summary of conclusion~~

b. ~~Brief note.~~

The Essay

Dr. Abdus Salam, Pakistan's only Nobel laureate in physics, left the country due to religious persecution and lack of recognition of his skills. He continued his ground breaking work abroad, but Pakistan lost direct access to his brilliance. His story highlights how social and political factors can drive away top talent. It took Pakistan lots of resources and efforts to nurture a genius like him, still failing at it. If people like him were to stay at home and use their skills Pakistan can be among developed nations, one day. Unfortunately, Pakistan is facing problems of brain drain due to economic, political and social factors leading to human capital loss, hindering progress and widening technological inequalities consequently benefiting recipient nations due to influx of skilled professionals.
