Western Sanctions Are Weaponizing the World Economy

(1) Introduction

Thesis Statement: Western sanctions are ultimately moving to bring the global economy for upholding their hegemonic fabric on the east entities; moreover, their aim is to grasp the rule-based world order, which is so-called.

(2) The World Economy under an umbrella of sanctions: A brief view

(3) The world economy is weaponized by the west

(a) USA and its alliance imposing sanctions on Eastern states

case in point: Russia and Iran

(b) Trade tariff enforced by the USA on China.
Case in point: Huawei and electronic devices.

(c) The USA-China rivalry influencing the third world countries.

Case in point: Pakistan, Iran and Afghanistan.

(d) Hegemonic foreign policy of the west by posing economic threat to newly emerging countries.

Case in point:

Russia and China.

(e) Formation of the security blocs to curtail power of other states.

Case in point:

North Korea and Central Eastern countries.

(f) Imposing taxes and tariff on the energy.

Case in point:

Oil and gas.

(2) Manipulating global order by replacing with rule-based global order.

Case in point:

G7 Summit.

(4) Strengthening the economy of western bloc for paying the tough time to multi-polar states.

Case in point:

CPEC- BRI.

(7) AI being used as a tool of the economy for only western states.

Case in point:

Robotic machines.

(K) Security bloc in using the tool of Economy to 'contain the influence of the distinct ideology

Case in point:

Communism.

(4) Global Economy reshapes the world order by

influencing of the western Sanctions.

(a) Emerging the multi-polarity
across the globe

Case in point:

China, Russia, India

(b) International disputes
on the mantra of the
economy

Case in point:

Indo-Pacific Ocean
South China Sea.

(c) Religious factor grasping
the sympathy to give
the difficult policy to
opposite ideological
entities.

Case in point-

Islam and Socialism.

(d) Changing the dynamic
integrity of the rule-
based laws and organization

Case in point: IL-UNO

5) Conclusion

The tendency of the global factors and actors have changed in terms of the relations with the economic dynamic. Whatever happens in the global sphere, it is because of the economic development in the world. Therefore, that is the bitter reality that the one side of global sphere uses it as a weapon for the other global side. However, in this modern world, there is only a powerful weapon existing which is the economic dominance. To add to that, western sanctions use the economy as a tool to control the leverage of the eastern power over the world. They grasp the economic by imposing high tariff and taxes on the products of china and Russia. Furthermore, the USA and its

alliances alter the power of the emerging countries to block the way of the sustainable development, such as the central eastern countries. Sanctions on Iran and Russia trigger the west more powerful. Formation of the Security blocs designed by the west ultimately curtails the influence of the east. Global powerful states manipulate the economy in terms of their hegemonic approach on the other sphere of the globe as they have been posing it for a long era. By blocking the projects of the western countries, the western ~~maneuvers~~ ^{maneuvers} these developments ^{as} the global threats for the rule-based system of the world. Thus, western sanctions build the new mantra for the west to cur the economic dynamic

as a tool. For restraining the leverage of other sphere of the globe:

To start with, the economic factor in the 21st is the robust weapon for any entity in the world. Moreover, many a country leaves no stone unturned in achieving the sustainability in terms of economy. However, this is the same economy that is being used as a weapon for each other. To add fuel to the fire, economy is thoroughly under sanctions of the West. They use it as a weapon for acquiring their objectives. According to the realist school of thought, "International economy revolves around the West; they alter the dynamics of economy for their leverage." Thus, economy is a game changer.

tool through which any time the global order can be altered.

First and foremost, the USA and ^{its} alliance is strictly inclined to impose its sanctions on the eastern entities. There is a common weapon existing in the world that it is the economy. The USA and European countries imposed the severe sanctions on Russia and Iran in the G7 Summit. Their claim is that both countries have violated international laws and disobeyed the rule-based order. Thus, global north took the help of the economy as a weapon for both countries.

Secondly, western strategy is to suppress the

the global order by replacing
with rule based global
order is the robust dream
of the west. After 9/11,
the global order was
disturbed by the USA.
The USA itself violated the
rule-based global order by
invading in Iraq on the
name of weapons of mass
destruction. So, all the western
entities are forcing the global
east to come and pursue
this or else you all have
to counter economic sanctions.

likewise, the western
states rely on the economic
sanction. In the global
competition, there is only one
rule punishment that is
the severe economic sanctions.

In G7, Security Council and
the European Union, there ~~is was~~^{is}
one agenda to be prioritized

that is to strengthen the volume of economy, as they can uphold their influence on the third and under-developing countries. Ergo, Europe is replete with the advanced industries and technologies.

~~or~~

Another tool of the weapon is AI, which is manipulated the economic sphere. The 21st century is the century of the Artificial Intelligence. Mostly, the west changes the role of AI for sustaining the growth of economy and use it against the ~~west~~^{east} with the help of economic model. AI creates the modern tools for economy through which any states misuses it against the economic growing country.

Subsequently, The clash between two blocs that is the distinct ideologies. Moreover, there are two ideologies that prevail in the global times. One capitalism and other communism are completely aversion to each other in terms of the economic orders.

Historically, the USA had imposed restrictions on those states that were adopting the communist-ideology.

Similarly, the same tactics are being acquired by the USA and Europeans.

Similarly, the world is rampantly shifting from unipolar to multipolarity.

China is the new moon that rises from the east. It impedes the world west-~~ern~~ economic growth. However, to tackle the influence of

and Russia, they are formulating their foreign policy to bring ~~back~~ them back to the influence of the unipolarity through posing the economic sanctions.

Ergo, International disputes directly and indirectly tend to the western sanctions by their personal agenda. In the world, there are many conflicts that have been prevailing. Their links ultimately incline to the western sanctions. Russia-Ukraine conflict and Palestine-Israel clash, both connect to the western economic model. They support and constrain on those states that pursue their agendas.

Moreover, the religious factor is incorporated by the west to 'democratize' the

China by imposing the high tariffs and taxes. Since when China started growing in terms of the economy and trade, the western sanctions have been leaving no stone unturned to curtail the Chinese products and its projects. Moreover, the powerful G7 countries, which upholds the 40% world GDP, promised that China had a global threat because of ~~the~~ its cheapest products and its global hegemonic dream.

Third, The USA and China rivalry impedes the economic growth of the eastern countries. The world has divided into the two ideologies once again. Most importantly, China strives to build its leverage on the global economy and spreads

the balanced economic order. It sustains the Win-Win game. On other hand, USA is entirely doing the strict opposition to be replaced the capitalist with Communist economic order. Therefore, such as Pakistan, Sri Lanka and Central eastern states encounters the hurdles because of their economies.

Further, the western countries and their foreign policies are revolving ^{around} the hegemonic sphere to the emerging countries. A few days ago, the world super powers met together in Italy and planned the strict agenda to counter the Russian influence in Ukraine. They moulded the economic dynamic into sanctions. Thus, all the countries brought

the great consensus to seize assets of Russia. It was also given rise to that all these assets would be given to Ukraine. Thus, their strategy change the economic sphere into a weapon.

Fifthly, The new trend of security blocs is also to curtail the China of eastern states. The so called super power ^(the USA) signed the security pacts with the European countries, as well as Japan, Australia and Philippines. The security alliances, on such as Quad and AUKUS are trained to boast up their economy and then use it as a weapons against their rivalry. Hence, it has proved that western sanctions have weaponized the global economy.

Further, the global west also prolongs the tendency of tariff and taxes on the global energy. However, energy is the underlying means for any entity to manage its functions and duties of the states. The USA and its western partners raised the prices of oil and gas. They also boycotted from buying oil and gas to Russia and Iran. Not only this, but they are also impeding in the way of China as it can not purchase the global energy. Therefore, they have obstructed for China and Russia through signing pacts with Japan, India and United Kingdom on Indian Ocean.

In addition to, it is manipulating

the eastern economy. Historically, the concept of religious-economic model has been remained at the peak. In G7 Summit, all the western countries invited the pope Francis for realizing the world that they were stranger followers of the Jewish-Christian. They wanted to bring the African countries into bloc and created the obstruction for the eastern countries in term of economy.

Besides, International Law and United Nations Organization are being linked to the economic influence. The western countries have their strong influence on the I Law and UNO. through which they try to pose their hegemonic power over other countries, having the strong background in terms of

economy. It will not be wrong to state that the might is right and money is power. Likewise, Western countries use the global economy as the weapon for all the eastern countries.

In conclusion, history repeats itself. In the global phenomenon, the strong existence is only those entities that hold the economic power. Indeed, the west has its existing power in the advanced economic model.

There is no denying the fact that the west is weaponizing the global economy, replete with the sanctions. In the particular perspective, the west, American and the European states are constantly sanctioning the global east sphere with

economy. To add to that,
everywhere, the leverage
of the western sanctions
is existing. In short, the
Western bloc has its sole
power in a shape of economy
that they are its own
gains.
