Global Burning

Finally, the world has entered a new phase of global ~~war~~ warming which is termed as 'global burning'. The gradual rise in temperature has shattered all previous records and June ~~2024~~ of 2024 has been declared as the hottest ~~war~~ month by different climate-related agencies. The change in weather pattern and sharp rise in temperature have shocked the climate experts as it has broken all previous records.

Pakistan is among the most vulnerable countries which are bearing the brunt of severe heatwaves. Some cities of Sindh and Punjab witnessed the highest temperature of 53°C in the month of June. Moreover, the change in monsoon pattern also indicates the perilous situation in the country. Many agricultural ~~year~~ activities have been harmed due to change in pattern of rains, and temperature.

It is necessary for the developed countries to ensure their commitments regarding different climate-related pacts. These countries are majorly responsible for climate degradation as the concentration of carbon dioxide and methane is rising despite having a numerous pledges to counter its rise. The least developed and the underdeveloped developing countries should also ensure climate resilience and adaptation plans by formulating different policy frameworks. Pakistan should also ensure to acting upon climate Change Act-2018 and National Adaptation Plan-2023 to mitigate the challenging effects of climate change. Moreover, transitioning away from fossil fuels and shifting to renewable energy resources is also need of hour to cope with the rising threat of global warming.
