

Climate Change May Unite Humanity.

1) Introduction:

The contributions of multilateral treaties, global campaigns and awareness programmes, aiding vulnerable communities during climate crisis etc. may unite the humanity to combat the existential threat produced by climate change. However, the prevalent geo-political tensions are much threatening. Thus, if we failed to show resolve now, the climate-induced disaster will be dire and unrelenting.

2. Brief Historical Analysis of climate change and how scientists contributed to combat the challenge.

3. Factors that may be responsible for the unification of humanity due to climate crisis:

3a) Role of Media and civil Society in influencing Public Policy.

(People's climate vote 2024, UNDP, China = 80%, India = 76%, US = 54% and Saudi Arabia = 25%).

3b) Discovery of Ozone Hole; Montreal and Kyoto Protocol.

(Scientists fight against government policies - meeting of scientists in 1985, at Villach, Australia).

3c) Role of Paris Agreement in unification of different governments.

(President Buhari Chama said,

"This agreement represents the best

chance we've had to save the one planet that we've got".

3d) Importance of Conference of Parties (COP) in unifying humanity

(COP28 Agreement Signals "Beginning of the End" of fossil fuels. Dr Sultan Al-Jaber during his closing speech said, "we have worked very hard to secure a better future for our planet. we should be proud of our historic achievement"

3e) UN-Bodies; IPCC, UNFCCC, and SDG's major contributions in unifying promoting diplomatic negotiations on climate change.

"Unless we act now, the 2030 Agenda will become an epitaph for the world that might have been" - Antonio Guterres

3f) Role of Climate Activists, Philanthropists and others in integrating communities.

(Bill Gates commented; "climate change is a terrible problem, and it absolutely needs to be solved. It deserves to be a huge priority."

3g) Role of Developed countries in assisting vulnerable communities affected by climate crisis.

(Report of Al-Jazeera, Pakistan official says donors at Geneva conference commit more than \$9 billion to help it recover from the 2022 devastating floods).

3h) Case Studies of the world's top
Nationally Determined Countries and
their contribution to combat climate crisis.
(Case study of Bhutan and Sweden).

4. Factors responsible for creating a gulf
between the countries, hindering the path
of unification.

- Geo-Political Tensions and Economic
Rivalry globally.

5). How to ~~Start~~ ^{in order} the Process to enhance
International cooperations.

5a) Accelerating diplomatic negotiations.

5b). Promoting awareness campaigns and
enhancing individual's roles.

(UN's SDG's youth demanding Climate
Action Report says, "47% do not mention
climate change in their National curriculum").

5c) Increasing Climate Loss and Damage
Fund for supporting vulnerable communities.

(According to UNFCCC Analysis 2023 :

"Developing countries needs amount to
nearly \$6 trillion by 2030 to meet their
NDC's).

6). Conclusion.

Climate Change may unify humanity.

• Introduction:

The Egyptian Minister, Rawia Al-Mashat, says, "There is a financing gap related to SDG's. There is a financing gap related to energy transition and green transition globally.

The government alone cannot achieve these objectives. The Energy transition is an international effort". Climate change is a global emergency that goes beyond national and international cooperations and coordinated solutions at all levels. As climate change does not require visa to cross borders.

Human led manipulation of natural resources, have jeopardised the natural process of our planet. Consequently, resulted into natural calamities such as; rising sea-levels, exacerbating heatwaves, destroying human health, demolishing the infrastructures and property along with many other disastrous consequences. In such a case, much of the responsibilities ^{lies} on the

shoulders of the developed countries to reduce the ^{emission of} Green House Gases like carbon dioxide (CO_2), Nitrogen dioxide (NO_2) and methane etc. which are the leading factors contributing to responsible for global climate crisis.

Though, it's quite that governmental initiatives to combat climate change has started too late. But, after the discovery

DATE: 1/1

of Ozone holes and influence of civil society and media in the form of massive protests which included approximately 7.5 million people across ^{the} globe, have compelled governments to change their public policies and unified governments. Thus, they worked together to combat the deadliest climate crisis. Therefore, international treaties in the form of Montreal Protocol, Paris Agreement, UN-based conference of parties are specially designed and ratified by ninety percent plus countries to cooperate internationally. Their major target were to reduce net-zero carbon emissions by 2030. Hence, the contributions of multilateral treaties, global campaigns and media awareness, aiding vulnerable communities during climate crisis etc. may unite the humanity to combat the existential threat produced by climate change. However, the prevalent geo-political tensions and economic rivalries are much threatening. Thus, if we failed to show resolve now, the climate-induced disasters will be dire and un-releasable.
