Climate Change causes and effects

Expository Essay:-

1. Introduction:

1.1. Hook

1.2. Supporting sentences / Background information.

1.3. Thesis statement.

2. Causes of Climate Change:

2.1. Pollution enhancing climate change

a. Air pollution the major cause of climate change.

b. Water pollution taking part in endorsing climate change.

c. Use of technology also plays role in pollution as well as provide ease.

2.2. Deforestation another major actor in climate change.

a. Deliberately clearing forests for industrialization.

b. Clearing forest for woods and timber.

c. Clearing up of forests ~~for~~ to cope up with increasing food demands of extremely growing population.

2.3. Overpopulation plays a key factor in climate change.

a. Need of more food compels us towards deforestation and industrialization.

b. Growing population certifies increase in pollution due to human activities.

c. Overpopulation results in mis-use and abuse of natural resources which induces climate change.

2.4 Industrialization has massive influence on climate change.

a. Increasing population increases demand for food, shelter, medicine and education for that purpose industrial revolution is imparting alot in climate change.

b. To compensate the transportation needs of growing population, industrial sector is growing and contributing alot in climate change:

c. Industrialisation is also increased

to improve our exports.

3:- Effects of Climate change:

3.1 Global warming is an alarming effect of climate change.

a. Smoke from vehicles and industries triggers air pollution which impacts global warming.

b. Greenhouse gases plays important role in global warming.

c. Chloroflourocarbons emitting from air conditioners and refrigerators also impacts global warming.

3.2: Water Cycle and habitate reduction due to deforestation.

a. Deforestation disturbs transpiration and humidity in air - causing less precipitation which disturbs the water cycle and bio-sphere.

b. Deforestation and habitat reduction of many species is alarming situation causing disturbance in food chain and food web.

c. Deforestation contributing in climate change by not purifying the environment and creating air pollution.

3.3:- Abusing natural resources due to alarmingly increasing population.

9. Growing population needs more food, shelter and medicine hence, over-use of natural resources effecting

climate.

b. Tremendous population needs more vehicles for transport - creating more air pollution which induces a climate change.

c. Industrialization to accommodate human needs also imparts a great part in climate change.

3.4. Industrialization, a blessing or curse.

a. - Besides the gains of industrialization tremendous air pollution is a gift of it.

b. - Clearing up lands for industries a major player.

c. - Water and Land pollution also create climate change.

4:- Conclusion.

Introduction

Two weeks ago I got the chance to travel to Islamabad to meet my brother. Enjoying the beauty and peace of Islamabad. I was very happy. In last days of June I asked my brother to visit and hike Margalla hills but he told me that Fire has been there in Margalla Hills due to heat but later on we came to know that there were some suspicious persons who were involved.

My purpose to tell this story is that climate

change is so drastic that it is effecting every person and every field of life. Climate change is triggered by overpopulation, industrialization, deforestation and the main culprit is pollution created by humans. These factors causes too much effect on heat increase, global warming, water cycle, mis-usage of natural resources, deforestation, forest fires and alot more.

people can live without love but cannot live with out a healthy environment which is being destroyed by human activities and creating climate change.
