Essay

When Dr. Ayesha Khan, a leading neuroscientist, left Pakistan to pursue opportunities abroad, she joined a growing wave of talented individuals seeking a better future outside their homeland. This example highlights the broader issue of brain drain in Pakistan, where many skilled professionals are leaving due to economic problems, political instability, and lack of opportunities. Such decisions reflect deeper systematic problems within Pakistan. More than 30% doctors and 50% IT professionals in Pakistan are thinking about moving abroad due to limited growth and safety issues. This trend affects Pakistan in many ways. Economically, losing skilled workers, reduced innovation and productivity. Socially, it leads to family separation and politically, it weakens the government. Educationally, it causes a shortage of quality teachers and researchers. This study will explore why brain drains happens in Pakistan and its consequences, emphasizing the need for effective solutions to improve conditions for the country and create a better environment for its talented people.
