Write a précis of the following passage and suggest a suitable title: (20)

The incomparable gift of brain, with its truly amazing powers of abstraction, has rendered obsolete the slow and sometimes clumsy mechanism utilized by evolution so far. Thanks to the brain alone, man, in the course of thousands of years for animals to achieve the same result through the processes of evolution. Thanks to the brain alone, the range of our sensory organs has been increased a million-fold; for beyond the wildest dreams; we have brought the moon within thirty miles of us, we see the infinitely small and see the infinitely remote; we hear the inaudible; we have dwarfed distance and killed physical time. We have succeeded in understanding them thoroughly. We have put to shame the radius and lime consuming methods of trial and error used by Nature, because Nature has finally succeeded in producing its masterpieces in the shape of the human brain. But the great laws of evolution are still active, even though adaptation has lost its importance as far as ourselves if we misunderstand the meaning and the purpose of our victories. And we are free to forge ahead, to prolong evolution, to cooperate with God if we perceive the meaning of it all, if we realize that it can only be achieved through a whole hearted effort toward moral

and spiritual developments. Our freedom of which we may be justly proud, affords us the proof that we represent the spearhead of revolutions; but it is up to us to demonstrate, by the way in which we use it, whether we are ready yet to assume the tremendous responsibility which has befallen us almost suddenly.

Title: Human brain evolution and Scientific discoveries

Human brain is great gift and it has evolved through amazing power. Human made a lot of developments in various areas such as kill physical distance, went on moon and sensory organs has developed in more advance, all these developments has done due to human intelligence. Human brain evolution is still active, and nature has succeeded in shaping human brain. However, Men depend

upon science ^{for its right use.} In case of its misuses he
will bring destruction upon himself. The right use
of science can be ensured if man works
for his moral and spiritual development.
