

## Artificial Intelligence

has been mentioned

The term AI ~~is~~ has been mentioned every where, especially after the launch of Chat GPT. What AI actually ~~do~~ has achieved so far, it performs any task or function stored or provided in the backend. It uses the relevant material and data stored and process

do not write in pronouns

~~according~~ to demand to produce results. If ~~you~~ ask AI to write essay on any topic, it would write that in a minute with no errors of grammar or vocabulary. However, the facts and figures provided may be disputed. It can also write in different styles and different patterns depending upon users demand. These are different advantages which different fields people can have from this technological advancement in the field of AI.

In education sector, students have many learning opportunity through AI ~~learning opportunities~~ easily start research on any topic without prior knowledge.

AI also recommend sources from where one can study on required topic. Student can concern these topics and still if there is any confusion or difficulty in understanding he or she would easily concern AI chatbot. It can also help

to make outline of any particular topic and highlight important aspect which are important for understanding and learning. AI ~~can~~ also help in managing schedule of students. If you are a student struggling to manage his or her time, AI can help on this matter.

it provides support

why u r writing in can form

too. Simply tell the AI your work load and highlight the important activities and ask it to make the schedule accordingly. It will give you a result within a matter of second. If you don't like it, don't worry. Just ask to make changes where required. So it can help student in many different ways possible.

it has also become a great source of

In the field of Software Engineering, it is also becoming a great source of help. Whenever some one is stuck with a code, he or she can simply put a code in front of AI to ask for bug or error. AI can find immediately and also provided with a solution to resolve it. However, AI is not able to write a complete code without error but it is very helpful in making the general idea of the code which is really helpful for the developer to start a work with. Developer can ask AI to write code in any computer language, depending on the platform he is working on or other requirements. The use of AI has been increase massively in software field in last two years.

has been increase

this is no grammar at all

AI has different and diverse advantages. It is a great opportunity for everyone to seek knowledge and learn different things. It is really helping humans in different fields and playing major role in advancement of civilization. Sooner or later it will be going to be the part of our daily routine.
