and professionals

D Measures To reduce Brain Drain.

E Conclusion.

In Pakistan, brain drain is a climate. Brain drain brought a lot of issues across the country. It is migration of individuals to other wealthier countries for their priorities - Brain drain is a slang term that refers to loss of human capital from one area to. It usually happens when individuals and professionals leave their home countries to take advantages of better opportunities. The lack of industries and organisation is the cause of brain drain. Persecution based on religion, gender inequality, and high outflow of scholars to wealthier nations. Political instability plays a role in brain drain activities.

Not only these but also the lack of ø job oppertunities and quality of resources highly affected on brain drain. However, the country must face many consequences as a shortage of economy, loss of education, and rising of taxation are bad results of brain drain. The rise of poverty, inflation, and limited acess of health are severe things of brain drain. Shortage of skilled educated professionals are the consequences of these things. In short, these causes have a bad effects on the consequences of brain drain.

Over all good attempt
