

Heatwave:-

Every year the people says the same thing, "This summer is very hot." It has been years that people are facing ~~some~~ heat issues, and the phrase does not change. Pakistan ^{is} geographically located on the equator. Sun rays fall directly on the equator that increase the temperature of the country. It is ^{just} not about Pakistan, this is about all other Asian countries. Even in Saudi Arabia 13,000 people ~~has~~ died during Hajj. In India, they gave the warning and red alert of heatwave. There are so many people who are dying due to heart stroke. There are many who have no homes, they are living and sleeping on the roads. As far as load shedding ^{is} concern, what about the people who are living on roads. How they are going to survive in this summer. The temperature of the country is very high this year, what ^{is} ~~is~~ ~~wondered~~ will happen next year.

Government cannot change the location of the country ~~but~~ ~~all~~ ~~other~~

Consensus is very important ^{for how} ~~to~~ control
the ~~increasing~~ heat on this issue
They have to decide and make rules
to control the ~~heating~~ of Green house
gases. ~~can~~

Our government, ~~all they can do~~
to ~~make some rules~~ in the country
to prevent from dying, like
~~timing for employes to work~~, clean
water availability in every part
of the country, and ~~no less~~ load
shedding. Some of private universities
and schools are ~~still~~ open in
the peak of heat, government should
make rules to close all the school
and or ~~private sectors~~ in the summer.
Those schools or universities ~~can~~
shift their classes from physical
to online.
