Brain: Incomparable Gift of Nature

Brain is a unique gift. Its marvellous power ^{of abstraction} has outdated the complex processes of evolution. Unlike ~~evolutionary~~ mechanisms, brain performs tasks swiftly. Brain has strengthened human sensory organs. Man can see far away as well as microscopic objects, hear the ~~inaudible~~, and is able to compress time and space. With the creation of brain, ~~the~~ ~~natural~~ and error methods of nature lost significance. Although laws of ~~evolution~~ lost importance with reference to humans, these are still active. Now man is tasked to move forward the process of evolution. It is up to him whether he embraces it or quits it.
