

Diversifying exports

For boosting economy, Pakistan must work on diversifying its exports. It is undeniably true that a country's economy largely hinges on the trade with other countries, particularly its exports. In case of Pakistan, its trade is significantly negligible. Whenever trade it is able to conduct is owing to some of commodities that are well-established and greatly desired in the international markets.

Unfortunately, it is relying on a mere few products that are constituting its entire trade. Basically, Pakistan's exports comprise of 60% of cotton and textile products. However, it is irrefutably true that the country has enormous potential in other domains as well. It can take in an dates of Khairpur, bangles of Hyderabad, sports goods of Sialkot and Furniture of Faisalabad. To increase the volume of trade and boost economy, the country must diversify its exports.

Climate change

The world is facing climate challenges due to humans own misguided activities. There is no denying the fact that the ~~climate~~ ^{climate} was quite friendly and peaceful before the industrial era. However, as soon as the industrial era began, wroaths of climate also began to gather spirits to all the world and humanity. Today, humans are facing swifter vibrations and their lives are indeed at stake. They are experiencing unbearable heat; they are confronting constant threats of destructive floods; water scarcity has also become a new reality; and above all, it is unpredictable weather patterns that are causing immense pain. Unfortunately, all these are human induced. In the words of UN chief Antonio Guterres, humanity's impact on the world is swifter to that of meteors on the dinosaurs. Thus, humans are facing catastrophic climate change due to their own activities.

Climate change

The more humans indulge in activities that are detrimental to the natural setting, the more the world will feel the wrath of the menace of climate change. It is beyond even a shred of doubt that the source of climate change is humanly induced. People have carelessly engaged in activities that are detrimental to the environment, pushing to the materializing of climate issues.

At present, the world faces a diverse nature of climate challenges. It is facing intense heatwaves, destructive floods, dangerous rains, water scarcity, rising sea levels, etc.

All these issues have manifested as a result of humans' misguided and miscalculated activities. According to Red Cross Red Crescent Climate Centre, human-caused climate change has added 28 days of extra heat. Therefore, the world is ^{fully} responsible of climate change due to their own detrimental practices.
