

Passage: total words 206

One great defect of our civilization is that it does not know what to do with its knowledge. Science, as we have given us powers fit for a superhuman, yet we use them like small-children.

For example, we do not know how to manage our machines. Machines were made to be man's servants, yet he has grown so dependent on them that they are in a fair way to become his masters. Already most men spend most of their lives looking after and waiting upon machines. And the machines are very stem masters. They must be fed with coal, and given petrol to drink, and oil to wash with, and must be kept at the right temperature. And if they do not get their meats when they expect them, they grow sulky and refuse to work, or burst with rage, and blow up, and spread ruin and destruction all round them. So we have to wait upon them very attentively and do all that we can to keep them in a good temper. Already we find it difficult either to work or play without the machines. and a time may come when they will rule us altogether, just as we rule the animals.

Precis: 1/3 = 66 precis words: 69

Our civilization where science has a capability to make us superhuman but we do not use its potential.

As a human, we made machines for our comfort. In contrast, ~~it has~~ they have become masters of one's life. we have to look after all requirements to make them work properly and if we do not do, they stop working or ~~even~~ cause destruction. As time passes, human dependency on machine will make them ruler.
