## Precis Writing

Modern education focuses on imparting academic knowledge but misses out on important factors. Life skills such as financial literacy, time management, communication and critical thinking are overlooked. This leads to students struggle with financial management, decisions making and relationship. Sidelining emotional intelligence makes stress management, conflict resolution, healthy relationship and adapting to new environments challenges for students. Standardized exams and grade systems did discourage students' creativity and passions. Ignoring topics on mental health, nutrition and well-being, compromise students' understanding of their mental and physical health. Educational systems should address these issues otherwise humans would lose the ability to deal with the world's difficulties in the future.

## Passage

Modern education systems have undoubtedly made significant strides in imparting knowledge and skills to students, but they often leave a major gap that hinders holistic development and preparedness for the complexities of life in the 21st century.

This gap lies in the neglect of essential life skills, emotional intelligence, and a narrow focus on academic achievement to the detriment of broader personal and societal needs. One glaring omission in modern education is the insufficient emphasis on teaching life skills. While students are rigorously trained in subjects like math, science, and history, they often graduate without basic life skills such as financial literacy, time management, communication, problem-solving, and critical thinking. These skills are crucial for navigating the challenges of adulthood, yet they are largely absent from the standard curriculum. Consequently, many graduates find themselves ill-equipped to handle real-world situations, such as managing personal finances, making informed decisions, and maintaining healthy relationships.

Emotional intelligence is another area where modern education falls short. Schools tend to prioritize academic success over the development of emotional intelligence, which encompasses self-awareness, empathy, and interpersonal skills. This lack of focus on emotional intelligence can lead to students who are academically proficient but struggle with essential aspects of life, such as managing stress, resolving conflicts, and building meaningful relationships. As a result, individuals may experience emotional turmoil and difficulty in adapting to the demands of the modern workforce and society.

Moreover, the modern education system often perpetuates a one-size-fits-all approach, failing to cater to the diverse needs and talents of students. The emphasis on standardized testing and grades can stifle creativity and discourage students from pursuing their passions. This narrow focus on academic achievement can leave students feeling unfulfilled and disengaged from the learning process, ultimately hindering their personal growth and potential.

Furthermore, the gap in modern education extends to the neglect of essential life topics such as mental health, nutrition, and well-being. These subjects are critical for maintaining a healthy and balanced lifestyle, yet they are rarely integrated into the curriculum. Students graduate without a fundamental understanding of how to take care of their mental and physical health, which can have long-term consequences for their well-being.

The dire need of filling this gap is now felt more than ever and failure to meeting this demand of the time is detrimental to future generations and humanity at large. We must hope that educators and educational institutions realize the need of this most significant human need without which humans are mere objects and the objects cannot deal with world's complexities. It is only the humans who have this capability to deal with complexities of the world only if they are prepared as humans.
