④ Conclusion.

Albert Einstein, the world famous physicist left the Germany, when Hitler came into power, horrified by the Nazi's war of extermination. He then stayed outside the Germany giving away his German citizenship. After staying in a few countries, he finally moved to the U.S. When World War-II started, and he got to know about nuclear programme of Soviet Union, he warned the U.S government about it. Finally, he helped the U.S and played an important role in U.S Manhattan nuclear project. This nuclear weapon helped the U.S in winning the deadly war, and coming out as a sole world Super Power. The migration of intellectual and professional people outside their homeland, termed as "Brain Drain", has a very long lasting impact on their country of origin. Unfortunately, Pakistan now a days is facing this problem more than ever. What makes people to leave their homeland? What impact this migration leaves on their country of origin? The most prominent causes are uncertainity, Unemployement, financial instability, inflation, lack of resources, personal security issues, immoralicity and corruption in homeland. This leaves with an impact of loss of professional human

stock, negative effects on economy, loss of foreign investment, law and order disruption and looming the future of next generation.
