

## PART-II

**Q. 2. Write a précis of the following passage in about 120 words and also suggest a suitable title: (20)**

It is in the temperate countries of northern Europe that the beneficial effects of cold are most manifest. A cold climate seems to stimulate energy by acting as an obstacle. In the face of an insuperable obstacle our energies are numbed by despair; the total absence of obstacles, on the other hand leaves no room for the exercise and training of energy; but a struggle against difficulties that we have a fair hope of over-coming, calls into active operation all our powers. In like manner, while intense cold numbs human energies, and a hot climate affords little motive for exertion, moderate cold seems to have a bracing effect on the human race. In a moderately cold climate man is engaged in an arduous, but no hopeless struggles and with the inclemency of the weather. He has to build strong houses and procure thick clothes to keep himself warm. To supply fuel for his fires, he must hew down trees and dig coal out of the earth. In the open air, unless he moves quickly, he will suffer pain from the biting wind. Finally, in order to replenish the expenditure of bodily tissue caused by his necessary exertions, he has to procure for himself plenty of nourishing food.

Quite different is the lot of man in the tropics. In the neighbourhood of the equator there is little need of clothes or fire, and it is possible with perfect comfort and no danger to health, to pass the livelong day stretched out on the bare ground beneath the shade of a tree. A very little fruit or vegetable food is required to sustain life under such circumstances, and that little can be obtained without much exertion from the bounteous earth.

We may recognize must the same difference between ourselves at different seasons of the year, as there is between human nature in the tropics and in temperate climes. In hot weather we are generally languid and inclined to take life easily; but when the cold season comes, we find that we are more inclined to vigorous exertion of our minds and bodies.

### The Impacts of Climate on Humans

Climate has profound impacts over human behaviour and efficiency. Moderate cold, as opposed to warm weather or intense cold, reinvigorates individuals by acting as a barrier. For instance, Northern Europeans, to sustain the moderate cold weather, have to construct cold-resistant houses, wear warm clothes, light fire by securing wood and coal, and obtain food to boost efficiency. Comparatively, individuals living in warm conditions do not have to go through these hurdles. They merely require

fruits and vegetables to survive, which are easier to obtain than foods packed with rich nutrients. Resultantly, they become inactive and energy-deprived. This difference is perfectly illustrated by human behaviour during different seasons; generally lazy in summers, and full of energy during winters.
