

The life of Bird is not similar to human's life.

All living creatures on the earth have their own different way of life expression. Not all but take few example of such creatures like the birds and humans. How they are different from each others? First of all, as we seen the birds have short life cycle as compared with human's cycle. Because, in humans the cycle continues from child's growth to an adult's. The overall journey shows that the life span of human while, in birds they also have same cycle of birth and death. But the difference we should observe that, they have not such long-life period as the humans can have. As humans, they bound them in works while, the birds are free from such things, so they enjoyed life ~~ess~~ properly. Secondly, birds are not bound in work so, they don't even needed cooked meals, fruits or any eating things. While, in human, they always refined those meals for better health issue, etc. Someway the birds drink the water wherever they get, but in human they first make it better for drinking purpose. Finally, the birds have freedom to go anywhere, but humans are restricted as they can't. Just like bird, the human also wants to fly in the sky but they can't do such without technologies. In conclusion we observe that the birds life is totally different with the humans life as compared with them.
