

Pros and Cons of Internet

Everything which exists and serves humanity, has pros and cons. Similarly, Uranium element whose discovery credited to Martin Heinsich was discovered to treat and save millions of cancer patient, is the same element which engulfed/swallowed thousands of souls in Hiroshima and Nagasaki atomic incident. Alike a cruise ship which offers romantic gateways and a unique vacation experience with many advantages can turn her destiny like Titanic ship which sank with more than 1500 lives. However, internet has also pros and cons. As of 2024, there are 5.35 billion internet users worldwide. From them cybercrime is the only crime which constantly on the rise. According to comparatechs 2023 study shows that cybercrime victims have peaked to 71 million annually with a cyber attack occuring every 39 seconds, ~~are~~ which results

results 35 million lost jobs worldwide annually. On the other hand, internet has created millions of jobs worldwide. With the USA alone it generated 17 million jobs. According to a report published in the dawn news stated that "in 2016-2021 7 million students have registered for online class for achieving academic excellence globally". However, the USA department for education reported that in 2023, online academic fraud accounted for 21% in a year. Globally credit card users and their payment have projected to reach a value of \$960 billion by 2032, on a new side, global losses from credit card fraud are expected to reach \$40.63 billion in 2027.

According to the words of 'real Noah Harari', "the next global pandemic will be a digitally inspired catastrophe" he further said that "the concentration and misuse of data can lead to a digital dictatorship". On the contrary, internet

has enabled global connectivity and collaboration on an unprecedented scale. It has facilitated free flow of information, ideas, cultural, civilisational interests, norms ~~and~~ values, and access to knowledge. In addition to this, Nicolas Carr known for his book "The Internet is doing to our brains" argues that "the internet is changing the way we think and remember". Moreover, Andrew Keen has written in several books which stated that "how today's internet is killing our culture. Alternatively, there are many writers who deride the usage of internet few of them are Steven Johnson who writes in his book that "how today's popular culture is actually making us smarter". So to say, it is upto upon human being that how they are using internet became internet in its true nature is a blessing and a ~~curse~~ curse.
