

Human Health is silent victim of Global warming.

Outline.

1- Introduction Global warming put Human health is silent victim of a negative impact on human health. Due to Global warming.

Due to this, human health is disturbed and many

What are

2- Causes of Human health is silent victim of Global warming?

- a- Burning of fossil fuel.
- b- Nuclear radiation
- c- Concentration of CO_2 , methane
- d- Deforestation

3- What are consequence of Global warming on human health?

- a- Loss of biodiversity
- b- ~~Major~~ Decline in

c- Disaste
d- Melts
and
* What are
to count
a- F
b- U
c- Rec
d- Me
s. Conclusion

Thesis statement
Global warming
types of
, ash and
human health.
Strategies and
health on

- c- Disaster impact on marine life
- d- Melting of polar ice, glaciers and ice sheet of green land

*** What are the measurements needed to counter it?**

- a- Forest planning
- b- Use of renewable resources
- c- Reduction of green house gases
- d- Mass level of plantation

s. Conclusion

Thesis statement:

Global warming is caused different types of gases, harmful radiation, ash and smoke that disturb the human health. By using different strategies and measurements, human health can be saved.
