Effects of Climate on Northern Countries

Climatic conditions of northern latitude countries affects the working of inhabitants. People of northern countries are greatly impacted by severity of weather and with deficiency of light, they lack in doing hard and steady work as compared to the people living in temperate zones, where the climate allows them to work and carry out their daily routine work as per schedule. Sweden, Norway, and Portugal have common feature with their agricultural productivity that is unfeasible. In result they faces instability in working sectors and volatility in their characters.
