

Outline: (PCS essay)

# 'The Future of Artificial Intelligence (AI)'

## 1- Introduction

i) Overview of AI

ii) Thesis statement: Artificial Intelligence (AI) will greatly shape our future by advancing many fields, but it also brings important ethical and social challenges that we must address.

But it may also create challenges. Moral and ethical challenges

2. Present working scenario of Artificial intelligence in the current world.

3- Role of Artificial intelligence in different fields:

i) The socioeconomic boost in industrial sector: Enhanced efficiency in the industries.

ii) AI in the field of education

iii) AI in the field of agricultural sector.

iv) AI providing innovative solutions.

4- Challenges confronting the usage of AI

i) Breach of privacy

ii) Death of creativity

## 5) - ~~Recommendations~~

i) Impose checks on its usage

ii) Managing AI-generated content by strong policy formulation

## 6- Conclusion.

How future of AI may be bright

Artificial Intelligence (AI) has rapidly evolved as a transformative force shaping various aspects of modern life, and is willing to expand it in the future endeavours. AI's advancements continue to accelerate, promising to redefine science and technology. It has impacted each and every sector and domain may it be socio-economic, educational, agricultural or any other department, making profound growth and development in every phase. As we stand on the brink of even more significant developments, AI holds the potential to transform and bring innovation in the world order but also raises important ethical and social challenges that must be addressed. Thus, it holds immense potentiality across various sectors but also raises critical ethical and societal questions that must be addressed to ensure equitable and safe advancements.

Currently, artificial intelligence (AI) is rapidly transforming various industries, showcasing its immense potential and setting the stage for its future evolution. AI boosts efficiency by automating routine

tasks, providing deep data insights, and enabling faster and more informed decision-making <sup>across numerous</sup> ~~in various~~ fields. It provides its services in healthcare, customer service, manufacturing, finance, transport. ~~At present~~ it has curtailed <sup>human</sup> power and replaced it with superhuman capabilities. For instance: Now there are AI-Powered Assistants. These virtual shopping assistants and chatbots help improve the user experience while shopping online. Natural Language Processing is used to make the conversation sound as human and personal as possible. <sup>Good very good</sup> Moreover these assistants can have real-time engagement with customers. This is how AI has influenced the world in each and every domain.

Artificial Intelligence has deepened its roots in the socio-economic order of the world. It is currently facilitating the industrial sector with ~~more~~ advanced ways & techniques. AI-powered machines and robots have enabled industries to operate around the world without human fatigue, reducing errors and improving product quality. An example to

elaborate this point is: Siemens, a German industrial giant, implemented AI-powered predictive maintenance in their manufacturing plants, resulting in a 50% downtime and a 20% increase in productivity. Additionally, AI-driven quality control improved product quality by 15%, leading to increased customer satisfaction and loyalty.

Mature content good

owing to the fact, the industrial sector is progressing by leaps and bounds through automation, predictive maintenance, and reducing the human errors and improving product quality. It is for socioeconomic gains by showing its efficiency and effectivity in the sectors such as industries.

AI is also performing miracles in the field of education. AI, via its new and novel teaching methods engaging and encouraging students in a more activity based learning with a preference to skill developing skill-set among the students. Moreover, AI-powered education system can analyze a student's learning patterns and adapt the curriculum and teaching methodology to suit his needs. In a case, where a student is struggling with a particular

topic, the system can provide additional resources or explanation to help grasp the concept. This sort of conceptualized learning would benefit them in the long-run, ~~on~~ the implementation and practically utilizing that knowledge. If we consider the present outlook of <sup>countries like</sup> Pakistan, the imminent arrival of AI is a silver lining as: According to multiple stats and Planning Commission of Pakistan, less than six percent of the youth population acquires technical skills, among which only 2 percent practically implement them. With AI overpowering humans, it can give provide real-time personalized learning to the students where they can ~~en~~ create a customized learning plan according to their strengths, weaknesses, and learning pace.

With every other field. burgeoning and blooming via AI powered techniques and assistance, agriculture is also in the mainstream. The advancements in agricultural techniques in the world arena as many ~~of~~ world economies are highly dependent on agriculture for their growth. The revolutionary

techniques in agriculture makes the countries stand out among the best in the world. The AI-Powered Farming with 'Kisan Hub' of India is not different in this regard. Indian Kisan Hub startup uses AI-powered techniques to improve farming efficiency and productivity. Through such tech startups, the agrarian economies can create personalized crop recommendations and thus can improve market access. This is the way AI can take hold in each and every domain to provide greater efficiency with advanced methods and techniques.

Why Can??

AI can also provide innovative solutions for human-created problems, which is another feather in its cap. AI can help in solving many global solution problems. A very common application of AI in is re gard Work on transitions of creating paragraphs self-driving cars, which are beneficial in reducing the rates of deaths and injuries on the roads, thus making driving safer. ~~as~~ Furthermore, AI can eliminates human bias and improves diversity and inclusion by offering up only the candidates who

fit the job's requirements. This ~~is~~ Through this process, the risks and chances of mistake in ~~any~~ <sup>In every sector</sup> sector and a solution-oriented approach is followed in any domain. AI-powered traffic management system integrates data from traffic cameras, sensors, GPS devices, and social media to monitor and analyze traffic patterns continuously. In this manner, it assists the modern systems to ~~reduce~~ in reducing their faults and fractures.

<sup>Piz shorten your sentences</sup> With AI being the cream of the crop in the contemporary society, there ~~is~~ is a dark side of this phenomenon as well. The most obvious among this <sup>is</sup> is the death of creativity. Students, workers even the entire world is <sup>holding</sup> complete reliance on it and are thus reluctant to ~~you~~ use their cognition in any ~~matter~~ <sup>context</sup> of concern. This entirely negligent behaviour leads to the death of creativity and ~~is~~ the lack of practical utilization of the mental capabilities of people. This ultimately leads to gives birth to a crisis in terms of critical thinking, decision-making and argumentation.

h skills among people. ~~Students just use AI to copy and plagiarise the content rather than creating their own.~~ ~~Students are taking help of AI to~~ This kills the creativity and reduces the brainstorming skills capabilities of students. ~~Snathbot, Chatgpt and other such softwares risk the~~ ~~a novel concepts and AI based algorithms took their place, which leads to decline of cap human abilities.~~

es. Apart from the a ~~creativity~~ killer, AI is a tool that is detrimental in a respect where it breaches the privacy of the user. ~~The user~~ ~~AI just provides the user & person with what he commands it to do. Due to this, user it exposes and showcases all what is instructed.~~ ~~This aspect causes security threats across the~~ ~~for world among companies, businesses and <sup>in the world</sup> freelancing.~~ Usually the third parties are involved and this create a crisis in the ~~cyber space~~ <sup>security space</sup>. To exemplify this, Smart Speaker can be the best example. **Smart Speaker; a popular virtual assistant, collected audio recordings from users' homes without humans clearly disclosing that humans would be reviewing these recordings.**

This led to a p breach of privacy, as users were unaware that their conversations were being reviewed by human analysts. This <sup>va</sup> privacy breach leads to mistrust and at individual level ce and chaos at world level and thus reveals bleak picture of Artificial intelligence.

Try to bring transition within ideas

In order to curb the challenges, it is necessary to impose checks on its li usage as it is going to ~~the most~~ a robust source of information ~~is~~ and a mean of human replace and displacement ~~is~~ at workplaces in the near future. A check on it working and positive usage, keeping limits and privacy safe ~~is~~ and ~~sound, should~~ <sup>Should also be ensured</sup> be ~~ensured~~ A sound ~~of~~ monitoring system, should be introduced, beyond which its functioning should be ~~restricted~~. ~~to~~ ~~er~~ ~~A~~ Governments can establish regulations and guidelines for ~~the~~ AI development, deployment, and usage. Implementation of human oversight and review processes can help detect and correct potential issues.

For this purpose, Google established AI Ethics Committee to review and oversee AI projects, ensuring they align with ethical principles and guidelines.

• By implementing such checks, we can ensure AI is developed and used in ways that ~~that~~ benefit society and respect human values.

~~In this post modern world~~  
Managing AI generated content is also the need of the hour as ~~in the present setting~~. The research or content shared should be ~~monitored~~ under some authority before publishing or publicly announcing it for the viewers. The content management is the primary aspect; with which future reliances can be made on AI and it would be considered a blessing rather than a curse. With each growing day the ~~chat~~ content variety and new tool of AI are diversifying and a check-and-balance on the content uploaded <sup>to</sup> mechanism should be strengthened to streamline the content-check ~~do~~. ~~Li~~able policies in this regard should also be made by the global leaders to overcome the ~~hurdles~~ and challenges faced by the people in the world.

~~At~~ ~~At~~ On concluding note, Artificial Intelligence (AI) has

medical and neuroscience ~~research~~

overpowered the modern world in each and every sector and respect by replacing itself with human potential. It has significantly strengthened its roots in the various sectors such as improving the socioeconomic structures of the countries, education, agriculture and numerous different fields. At present it has given a boost to each of the working platforms where human agency was supposed to perform its tasks. AI poses greater efficiency and effectivity in all spheres of the world. Nevertheless, it has ~~it~~ <sup>its</sup> detrimental effects to be used in the future which include breaching sovereignty, and death of creativity. To counter them, effective policies for its curtailment such as keeping checks must be ensured to prove its acceptance and safety for future generations.
