

Global Warming: A Fact or Fiction

Outline:

1 - Introduction:-

Thesis Statement: Global warming is undeniably a fact, supported by the consistent rise in temperature and the increasing frequency of natural disasters. Despite these alarming trends, effective measures can be taken to mitigate the impacts of global warming.

2. What are the indicators that proves that global warming is a fact:

2.1- Earth surface temperature is constantly increasing

i- Report of Global Climate Risk Index.

2.2- Oceans are getting warmer and acidic

i- Report of IAEA

2.3- Increasing the number of natural disasters

i- Report of UN office for humanitarian affairs

2.4- Increasing day spells and droughts.

i- Report of UN Convention to Combat Desertification

2.5- Glaciers are melting at faster rate.

i- Report of UN Environmental Protection Agency

2.6- Sea levels are rising at an alarming speed.

2.7- Heat waves are getting more intense and sudden.

i- Report of United Nations

Date: _____

3- The case-study of major climate-hit countries:

3.1- The case study of Pakistan floods 2022 ✓

3.2- The case study of Dubai floods 2024 ✓

4- Conclusion:-

Mention few remedial measures as well

Introduction :-

"Global Warming isn't a prediction. It is happening."

(James Hansen)

Global warming has become a controversial issue. Some people think that global warming is not a reality but some people believe that it is a real process that is now happening at unprecedented level. However, by analyzing different factors and ~~unusual~~ unusual events occurring ^{in the} world, it is clear that global warming is a fact. It has undoubtedly caused ~~a~~ devastating problems for the world. If proper steps ~~were~~ ^{are} not taken timely to minimize this change then it ~~could~~ ^{could} make earth uninhabitable for most of the species. Some of the most important indicators of ~~the~~ global warming are melting of glaciers at faster rate, increasing the ^{number} of natural disasters, oceans are getting warmer and acidic, increasing day spells and

droughts and earth temperature is
constantly increasing. ~~the~~ ~~these~~
~~radiation~~ ~~process~~ ~~the~~ Global warming
is a fact. Undeniably a fact, supported by
the constant rise in temperature and
the increasing frequency of natural disasters.
Despite these alarming trends, effective measures
can be taken to ~~mitigate~~ mitigate the impacts
of global warming.
