Title:-

Laziness - A Blessing In Disguise-

Precis:-

Majority of the people evil in this world is brought by energetic and active people.

Problems we see today are mainly from active people rather than lazy ones. World has

plenty of energetic people but is mostly misguided. This world would be a better place

today if people from power corridors

in the past had been less active. The active and busy people in the past did

a great damage to the world. Even now,

if politicians take a lazy break from their activities then the world would be better

off. There are some particular religious sectors who spend their time objectifying

women and criticizing norms. All of them need to abandon their activities and take a long break to restore their mental health.

~~Title:-~~ Climate Effects on Humans

~~Precis:-~~

Climate in northern Europe is quite noticeable because it has positive effects on human physiology. A moderate cold triggers a man's activity but intense climate whether hot or cold brings barriers. To survive in an indecent climate, a man engages himself in hopeful struggles. He takes all the necessary precautionary steps for his social security and livelihood. Contrarily, life in tropics is altogether different where a man lives comfortably, conveniently and safely without warm clothes. This takes little or almost no energy for a person to obtain healthy food. A man's reaction varies in different climates. In hot climate, he becomes relaxed and easy. However, in moderate cold season, his tilt is more towards physical and mental activities.
