

Artificial Intelligence can be the savior of the human race

Outline

1 Introduction

Artificial Intelligence has the potential to be the savior in the human race at various fields like medical, transportation, business and education. However, some people consider it as a threat in human world due to some reasons. Despite some disadvantages, it has a lot of benefits.

2) What is AI and its link with the human race.

3 How AI can be the savior of the human race.

a) AI in medical sector

(Robotic surgery, disease diagnoses)

b) AI in transportation fields

(automatic vehicle, camera sensor)

2

1.1.05

c) It helps in business
(Analysis by data, online campaign)

d) It provides various advantages in
education fields (Chat GPT,)

e) AI has the potential to ^{face} risky
situation
(In disaster, Bomb exploding)

Q) How AI poses threat to
the human race

a) Heavy cost
(Six robotic \$7.838 bn)

b) It creates displacement of job
(around 85 million by 2025)

c) Lack of ~~privacy~~ security
(~~money~~ ~~laundering~~,)

d) ~~It supports long life~~

d) It kills creativity
(overreliance on AI)

e) Threat to human due to
sensitivity reasons

5) Despite some drawbacks, AI has a lot of opportunities for human

a) It provides urgent facilities in health

(Less hospitalization, less pain)

b) It creates a lot of jobs (97 million by 2025)

c) It suggests analysis based decision

d) various new skill development

e) It saves human from dangerous situation

6 Conclusion

_ _ / _ / _ عت

Artificial Intelligence has changed the world with modern equipment. Before it people were faced dangerous problems at different fields. But AI provides a lot of platforms where people can reach easily in a movement. AI has the ability to be the savior of the human race at different levels. So, the potential of AI, develops new versions of modern world in medical sector and transportation sector. It has also the ability to improve business pattern by providing latest platform. It also supports in education department and in dangerous situation. However, some school of thoughts states about continuously evolving of AI. They consider it expensive and jobless. AI kills creativity of students due to overdependence.

1 / 1 6/5

once on AI. Despite some drawbacks, AI has provided a lot of advantages in employment, new skills, analysis data and in human activities. Artificial intelligence has the potential to be the savior of the human race in various fields like medical, transportation, business and education. However, some people consider it as a threat to human race due to some reasons. Despite some disadvantages, AI has a lot of benefits.

McCarty, an American scientist, defines that AI is the scientific and engineering computer. AI provides knowledge about humans that how human learn, think and work. In contemporary world AI has taken important place at

human world. AI is providing unprecedented new things and new skills. It boosts human capabilities in employment, business and transportation.

First of all, Artificial Intelligence (AI) improves medical problems. Because of new systems, providing by AI, developing new facilities for patient in surgeries and diagnoses. So, AI has the potential to surgeries without error. Robotic surgeries are working without any fear of pain. It has the potential to work without breaks and absent for a movement. previously, people faced medical assistance due to limit doctors. But now with the help of robotic, people can get urgent basis assistance from ~~robot~~ it. Similarly, it

diagnoses new dangerous disease which can be prevented at early stages. Recently, AI provides ~~at~~ systems to doctors which doctor can check cancer at early stages. These all things are possible due to AI.

How can ~~we~~ human deny such unprecedented advantages. Therefore, AI develops new skills in medical sectors.

Moreover, Artificial intelligence helps in better transportation field. It provides automatic vehicles and camera sensors which are more beneficial. So, it has created such vehicles which can run without driver. Elon Musk has vehicle without driver people can travel without stress of driving. Not only this, but also another

several examples of automatic things. These all new avenues were provided by AI. AI also helps in traveling because it has cameras which take care by sensor. Due to sensor, there is no fear of accident of vehicles in traveling. Therefore, AI has changed human ^{world} activities by providing new innovations in transportation system.

Furthermore, it increases business productivity by providing online campaign and analysis of data. Businessmen take help from chatbot to search data and trend of business. Chatbot helps businessmen to providing experience and contemporary trend of markets. So, due to AI, there is no chance of loss in businesses in

current era. AI has the potential to share product of market through online applications. New businessmen gain a lot of advantages by involving AI in campaigns. Hence, it has the ability to increase businesses facilities for human.

In addition to, education department takes a lot of opportunities through AI. ChatGPT is the one of best source for students to learning new knowledge. Students are learning through AI with new version.

Chat GPT is a source of study which can answer about any thing at any time. Due to easy source, students are going to this platform for learning purpose. Chat GPT is available every time and

it helps in every issues related about education. Not only this but also there are several other sources which provided by AI. AI developing unprecedented skills which can not be learnt easily.

However, AI improves educational skills by different aspects.

AI has the potential to face the risky situation. It can face in disaster and war and climatological threats. So, AI can face without fear and without ~~loss~~ losing its life. AI can go any place in disaster condition where man cannot go easily. Man always remains under threat in disaster conditions. where he avoid any assistance.

to other needy persons. But AI even today is being used by developed countries for ~~at~~ disaster situations. It also helps in exploding of bomb without any fear. Not only this but also it can go deepest ocean for observing any things. As a result, AI can help in dangerous circumstances without any fear.

"People should be worried about threat posed by Artificial Intelligence" - Bill Gates

This quote states that there are some drawbacks of AI. Even today people consider it as threat due to some disadvantages.

So, Artificial Intelligence cost is very high. Because

of high cost of robotic it is not beneficial for human. Robotic equipment cost is unexpected.

Recently, interim health minister of sindh government denied to procurement of robotic equipment in health department. Because, the cost of six robotic machines are Rs 7.832 bn.

How can ~~afford~~ poor country afford huge amount not only this but also a cost of single surgery of robotic is \$12000.

This may be elites concern not for common man. Thus, AI ~~helps~~ ^{posed} a ~~great~~ threat due to heavy cost.

AI creates displacement of job. There are several examples which shows that AI will rule on human work place.

So, the current evolving AI growth posed threat to workplace as displacement of job. The World Economic Forum estimated that AI could lead displacement of around 85 million jobs by 2025. The given data shows this is biggest threat to work labour at different level. People are already suffering unemployment so how can face this huge attack. So, as Bill Gates ~~said~~ said about AI's threat people should be dwell upon improving AI. Therefore, AI creates jobs displacement which is huge threat towards the world labour. It also create unemployment due to modern equipment.

AI has no system of security in various fields. People are ~~worried~~ worried about current excessive use of AI. It can damage reality due to excessive application. Threat of cyber security always remains a headache for every person. It can create various new challenges about privacy concerns. There is no check and balance upon excessive use of AI which is clearly a sign of neglect of security matters. Even, it can affect legal proceedings by changing evidence with editing. Recently, the voice of Imran Khan has been changed through online applications. Thus, the security problems of AI are posing a threat to humans in various fields. The excessive use and lack of checks and balance over these

software is another tension.

Similarly, AI kills creativity by providing easy information. Chat GPT creates lazy curriculum chances. Previously students used their skills and solved their problems by creativity but now students go to Chat GPT for a lot of information. This shows that AI is creating space between students and ~~books~~ books. The students of modern era are already passing lazy life and less work hard while AI is killing their skills of critical analysis. Education system is not providing skillful education because students are indulge with online platform like Chat GPT and other applications providing by AI. Hence, AI is disrupting education sector through taking of

creativity and providing new sources.

In addition, AI poses threat because it has no sensitivity. people observe the situation through emotion and sensitivity but it has no sense which can damage human being.

Recently, it has been stated that AI has the potential to defeat enemy at border. Not only this but also it can use modern weaponize it means that it can destroye human being. It is the big sign of disturbance of peace because ever country would excessive use of AI which can complicate the world's peace. This is not favor in the human. Hence, AI destroye human life by excessive use of

modern weapons.

However, despite some disadvantages, AI has the potential to create more opportunities in all fields. It provides urgent facilities in medical sector. Because of modern equipment there is a lot of chances to urgent basis treatment and surgeries in medical field. It has also provides best services than clinical and physical services. In the era of AI, Every people can take access of anisment which in previous era was difficult for every one. It also provide relief in hospitalization due to less pain and urgent ~~for~~ recover health. So, these things show that AI is more beneficial than cost because of

its modern equipment.

Similarly, AI has created unprecedented jobs in various fields. Even now AI is giving a lot of jobs opportunities. AI provides various new jobs and it develops financial background for every one.

The World Economic Forum estimated that AI could lead displacement of around 97 million jobs by 2025. It develops various

platforms for jobs. The given data shows that AI can accelerate employment.

people should think about advantages of AI for the human instead of criticizing.

Therefore, AI provides a lot of new job for human with heavy weight.

AT suggest authentic data that given by experienced based. AT works on real and authentic knowledge. there is less chance of security problems. Government bodies are working about security matters.

AI offers various new skills. Student can learn new version of study like collection of data with reference and learning writing and reading skills. Student are gaining various new things from AI in the form of modern knowledge. So AI is providing a lot of new skills along with data.

_ / _ / 20_

AI can save human from dangerous situation. There are several examples which show that robotic machinery are more beneficial for human in disaster circumstances.

Developed countries are using for measure weather and prediction of natural disaster affairs. So, AI is the best source for human race.

To conclude, AI has the ability to be the savior in the human race at several fields like health care, marketing, vehicles and education. However, some humans consider it as a threat due to some reasons. Despite some disadvantages, AI has a lot of benefits. AI has

The potential to secure human future by various opportunities in several fields. Medical sector is taking a lot of benefits through AI. Education and transportation also developing their improvement through AI. However, some fears like unemployment, security problems and killing of creativity are connected with this. But these fears are not favorable, because AI has vast field for human race. It has expected that AI would be create a lot of advantages for human.

Well attempted
