Technology Era: Advances and Challenges

The new age of technology is reshaping the world. This removed the traditional barriers to information and is available to everyone. Huge amount of information is available on internet but the way this information is used, is reshaping the society. In new age of information, people are not limited to the traditional classrooms, ~~their~~ schedules and tools. Modern and global nature of new learning environment has ~~become~~ given freedom to learners to pursue their own interests at their own places which encourages cross functional mindset and innovation all across the globe. This rapid shift also created challenges. As this huge information made difficult to separate valuable knowledge from noise. New technology also demands new skills. It ~~also~~ ^{not only} changed the working environment but the life style. Artificial Intelligence and Machine learning requires more advance skills. Individuals who have the capability to use this information wisely, will decide the future of education and society.
