The Essay Climate change has become a more detateable fonct cliscuss issue of 2kt century He cuts as a tool in clestrough the economic of cheleping countries this devestating sonario curges the need sustionable growth. As the former secretary general, Banki Moon rightly said. " Climate change is no longer a distant threat, it is today reality. We must act to reduce greenhouse gass emission and move to Low carbon economy. While promoting sustianable growth and development. This shows that climate change has many negative implications economy. Rising natural disasters and changing weather puttern lead to economic loss and mitigate economic development Similar to this, economic growth also reduce by shonging distribution of natural resource and increasing climatic Vorictions like smognificativales. These disastrais situation urge the need thinclusive and susticinable divelopment by promoting SDG; youl and low-corbon economy. In addition to this, there is need of building climatic resilience and adaptation and investment

in green infrastructure development for inclusive growth Sustianable agriculture practice and disaster risk reduction and management con play a big role in ecouraging inclusive and sustrable growth inshort. Climate change has many negative implications of economics development. This urges a need to promote sustionable development and inclusive growth to combat in changing climate. Natural disasters are increasing day by day Vause infrastructure damage. and property loss. Natural discusters are floods, hurricans, Tisunami, and earthquaks have regative empacts on economic development As these not only disturb ongoing projects but also damage buildings moreover, it cause disruption of tremsport networks, power grid water system and communication lines. These destructions of infrastructure distrupty economic activity in several levays. Damaged transport networks hinder the movement of goods and service. Similarly, power outages, a common consequence of storms and heatwaves impede daily life activities

For instance 2022 floods in Pakiston had significant economic impacts as it clarmage to infraisfucture. The floods destroyed over 1.7 million houses. 12,000 schools and 2,000 health care facilities. This highlighted the vulnerability of Pakistan's economy to climate-related disasters. In adition infrastructure clamage is directly related property olamage which disrupt overall economic growth. From the above discussion, it is proved that natural disasters have negative impacts on economy as it clamage infrastructure and reproperty loss.

Labour procluctivity and agricultural yield are reclused because of changed climatic pattern.

Chaning climatic patters like precipitation pattern rising temperature and intensifying heatwave cause preduction in agricultural procluctivity. As farmers are not ready for unpridictable weather pattern, their plans to increas procluctivity fails Moreover, grownseason pattern is changed because of climatic variation reduce the agricultural yeild. For example, a study by Asian Ovelapment Bank found that heatwaves in East Asia and the Pacific in 2024 resulted in significant conomic losses. Pariculture production

ha decline 2.5% in a year. This shows that climatic variation slow clown the economic growth. Moreover, Labour productive also reduce because of heat related illness. There climatic variation not noty reclude agricultural productivity but also Labours productivity.

Tourism and recreation activities also affected because altering of natural resources. Vorious climatic variation cause melting of glaviers, altering weather puttern, rising temperature and others. These changes become a reason behind aftering of natural resources. Anat effects many activities. As meeting of glavers affect the outdoors activities like string tiking et Moreover, rising frequency of weather events. Sea-leve rise and coastal erosion are threatening the existence of many beaches in addition, rising temperature affect the habital of money species. To illustrate this pionts consider the example of Deosai National Park, Pakistan Rising temperature have caused charged in Park's ecosystem, affecting the habitat of the Himalay an

prown bear. This has impacted townism with visitors no longer able to spot the bear. At this illustrate the impact of chimate chang on economy. As in 2023, the checkine in townism resulted in 20%. decline in revenue for local businesses. To conclude, climatic variation altered matural resource which effect tourism and recreational activities.

Health diseases because of smog and heaturers cause health cost that reduce economic growth smog, a toxic mixture of pollutants increased cordiovascular and others respiratory diseas According to World Health organization (WHO), air pollution alon is responsible for an estimated V million prematine death worldwide each year Moreovers heatwave also have devastating input on human health. Heat stress, heat stroke, dehydration and increased morality are major disease of caused by beatances. This lead to economic cost that ultimately impact economic development. For instance, a study by Harvard School of public Health found that the economic costs of air pollution in the United States one estimated to be over \$130 billion annually

This show health cliseases are clinetly related to economic cost To symmony, thating climatic pattern cause smood, readwaves that create many health closus. That effect economic developments.

The above paragraphs are about impact of climate change on economy.

Blica Following paragraphs emplion the urgent need of inclusive and sustimable growth in context of climate change and economic development.

Sustiable development can be achieved by aligning Dbs with economic development goal Sustianable goal compromised 19 goal and trigg to that promote sustianable growth the can be ensured that the economic development goals is inclusive and everyone can get benefit from it Moreover, it consider environment sustianability during planing of economic development goal Environment degradation can be reduced and sustianability can be whieved Imilarly by promoting sustianable consumption and production pattern, economic development can be made more environmentally

frenchy reclusing waste and pollution for Enstance, Kenja's sustainable development implementation has diven exonomic growth while reducing poverby and inequality. Theoreover, the government viscon 2030 plan prioritizes sustiable duelopment, with initiative the renewable energy, sufficienable agricultural grow and eco-tairism. These efforts have atteracted investments, created jobs and increased GDP. From above case study, it is proved that sustiable Development Goods can be fruitful for economic developments. Low carbon economy can play significant role to achieve sustianable growth and inclusive economic development As transition to low corbon recluce the Green house gass emission, resultantly stowery the rate of dimate change. When the rate of climate change reduce, it will recluce the economic cost because of climatic variation. Morcover, a low carbon economy con promote susticuble growth by creating new Job opportunities, stimulating innovation and attracting investment in clean technologies. These orgument can be well emplioned

Bongladesh's Climate Resilience Program that is a commendable initiative aimed at promoting climate resilient development and a low-corbon economy. Its investing in climate resilience reduce the economic costs associated with climate-related observers and domage to infrastructure. Therefore, sustiable and inclusive economic development can be achieved by transitioning to low corbon economic

Sustiable growth and inclusive cumonic g. development can be achieved by building climate resilience and adaptation to con reduce the economic cost caused by Datural disasters Climate resilience and adeptation achieve through early warning system, preparedness and building resilience infrastructive These adaptation help to mitigate the impacts of climate-change disasters. In addition, policies, laws and projection also play a critical role to genieve or clusive economic development laws, policies and projects ensure that any initiative related to economy must adopt climate resilience methods and others

framework of laws and polaces to enhance disaster resilience and adaptation are of these is Act on promotion of disaster prevention and mitigation measure? That promote disaster prevention and mitigation measure. This include the development of disaster-resilient infrashucture. Such laws can help to mitigate risk and loss related to disasters.

Inshort, Building climate resilience strategy and adaptation can be to achieve sushable development.

In the summory economic development
is recluced because of climatic variation this

necessiale the immediate action to achieve inclusive

and susticitie growth to combat with climate

change because economic development is effected

by climate change As economy cost increase

due to natural disgress and changing weather

pattern similarly tourism industry also affected

because of ecosystem disturbance. Heath cost

slow down economic growth which occur due

to smay and heatwares These implication vinge

a need of a Inclusive and sustrable growth

strategies to this regard SDGs frantwork and

Low carbon economy can help to achieve

this goal similarly, building climate resilience and adaptation strategy recluce risk and economic loss inclusive and susticiple development in cagriculture and environment can be achieved by green infastructure and susticible agriculture practices thanker These are some measures that can help to achieving sustiable development and growth As "Robert Swan" rightly said that sustionable development is the pathway to the future we wont for all It offers a framework to generate e conomic growth, achieve social justice and excersion sustiable environmental practico
