

01. Make a Précis of the following passage and suggest a suitable title:

*Canet*

Despite the understandable objectives of contemporary surveillance, many people have become increasingly concerned at the blur created between security and privacy and question whether individual privacy is being infringed upon for purported security purposes. With technological advancements and our increasing online presence nowadays, have we evolved into a society where protection of privacy is not the most important matter, and constant surveillance is just the way things are now? Do you agree that if you have nothing to hide, you have nothing to fear? |

Just because our surveillance system isn't exactly like the one in 1984, doesn't necessarily mean our privacy is being protected. We can see similar aspects occurring, just in ways that are less noticeable and probably have a less drastic impact on our lives. )

Next time you are out and about, I urge you to make an effort to notice security cameras in public spaces. You may be surprised at how many you don't notice when you're not actively looking for them. Similarly, if there's anything in this article that you don't know much about, I urge you to look into it (e.g. data mining, Snowden revelations, Australia's privacy and surveillance laws) or even read the terms and conditions of internet platforms you use to see how third parties use your information. ) 217

It's up to you to decide whether you want to become more aware and more critical of these systems and structures in our society, or whether you want to accept their existence and the inevitability of their continuous advancement. Do you think we are living in a Big Brother society? ) 267

## Surveillance: A question to Personal Privacy.

The current surveillance system has raised concern, whether it's for protecting the citizens or breaching their privacy. With the emergence of technological development, it has changed the world we live in. Nevertheless, our surveillance system has evolved since 1984, but it does not guarantee privacy. For instance, read the terms and conditions of the internet and it will surprise you how your information is being used. It's up to you to decide if it makes you uncomfortable or do you think we live in a surveillance state?
