

Our world is in a Surplus
of Multilateral challenges and
a deficit of Solutions

Outline

1- Introduction

2 - An overview of multilateral
challenges and deficit of solutions

3 - The world is facing multilateral
challenges

a) Threat of climate change

→ Global Risk Report 2024: climate
change is foremost risk

b) Menace of conflicts over
depleting natural resources

→ Indo-Pak and Turkish-Iraq
water Disputes

c) Danger of shifting global order
indicating more conflicts

→ US-China rivalry might lead to
new cold war

d) Peril of human rights violation
across world

→ Human rights violation in
Sudan, Kashmir, and Palestine

e) Risk of rising hatred among
people

→ Islamophobia and Zionism

f) Threat of Artificial Intelligence

→ Stephen Hawking: AI could extinct
human race

g) Trouble of nuclear weapons

→ ever-lasting example of
Hiroshima and Nagasaki incidents

4- Deficiency of solutions is exacerbating multilateral challenges

a) Absence of ^{viable} solutions regarding mitigating climate change

→ 2023 was the hottest year → IPCC

b) Deprivation of solution for controlling the depletion of natural resources

→ In 2035, Pakistan will become water-scarce country

c) Insufficient solutions for maintaining global order

→ Foreign Policy Magazine: USA is no more a champion of the world

d) Paucity of solutions pertaining to restrict human rights violations

→ Israel is ignoring UN resolutions

e) Shortage of ~~era~~ solutions for eradicating hatred among people

→ Islamophobic incidents in USA, UK

f) Death of solutions against
the perils of Artificial Intelligence
→ AI is eradicating jobs → World Economic
Forum

g) lack of solutions against the
danger of nuclear weapons
→ North Korea withdraw from Non-
Proliferation Treaty

5- Conclusion

A man was crossing jungle in order to reach his destination. Suddenly, he saw a mighty lion, a venomous snake and a hungry tiger rushing towards him. This frightened the man but he was completely unable to escape from the dangerous animals. Similarly, the world is facing multilateral challenges and a deficit of solutions. The multilateral challenges of the world are manifold. Some of them are climate change, conflict over natural resources, and shift in global order. Additionally, increasing human rights violation and rising hatred among people are also multilateral challenges. Furthermore, the threat of Artificial Intelligence and the problem of nuclear weapons are creating trouble across the world. Although, this plethora of multilateral challenges

is threatening the existence of humanity in the world, the world still lacks proper solutions. There is no viable solution for combating climate change and controlling the depletion of natural resources.

Similarly, the world has no solution for maintaining global order, restricting human rights violations, and eradicating hatred. The dearth of solutions against Artificial intelligence and nuclear weapons highlights the inability of the world to overcome prevailing challenges. Therefore, the world is facing a plethora of ~~problems~~ multilateral challenges but lacks proper solutions for overcoming them.
