

Topic: Expanding Information Technology a curse or blessing

Outline:

1) Introduction

(a) Hook

(b) General statements

(c) Thesis statement

2) Aspects where Information Technology is a curse (Anti-Thesis)

(a) Severely made people ineffective
Human body has become
dependent on technology - critical
thinking is reduced -

Unemployment

(b) Health issues:

neural complexes - sight issues
documentary analysis

(c) Environmental concerns:

pollution - depletion of natural
resources

Exposure to undesirable content.

3) Rebuttal to the aspects where Information Technology is considered a curse (Thesis)

Date: / /

- (a) World has turned into a global village - increased communication exchange of information
- (b) Easier working conditions: lesser mental effort is required - saves time - example of Japan
- (c) Improved security: CCTV cameras - data storage - incessant productivity
- (d) Enhanced quality of life: improvement in infrastructure - household devices - Pharmacology

4) Conclusion

The Essay

"The great growing engine of change - technology." (Alvin Toffler).

The expansion of information technology has raised extremely in the 21st century. The people of the century are living with it and having abundant benefits from it. Everything whether its technology or anything else have some pros and cons in it and the people using it experiences both. The Western world have

Date: / /

a major role in the expansion of information technology, but it has now become a global need. The third world countries are also ~~expanding~~ affected by the expansion of information technology whether it is positive or negative. There is not even a single aspect of human life, that is not under the influence of information technology. The aspects where information technology is a curse are the severely ineffective people, health issues, environmental concerns and exposure to undesirable content, also there are aspects where information technology is a blessing such as world has turned into a global village, easier working conditions, improved security and enhanced quality of life. Hence, expanding information technology is a blessing that is leading towards a more prosperous world.

First comes the curse that expanding information technology has made people ineffective. If

Date: / /

there will be a huge use of technology in every aspect of life, then it will make people ineffective. Human body has become entirely dependent on technology whether it is involved in household chores, official working, studies, politics, economy and a lot more. In the modern world, there is an increased use of robots and they are working like humans, communicating with them and even fulfilling their intimate needs. This all is leading towards the decrease in the value of human beings.

Furthermore, it is increasing unemployment because robots are doing all the work. Hence, expanding information technology is a curse in increasing unproductivity of people.

Second comes the health issues related to expanding information technology. Research has shown the severe impacts of information technology on

ESSAY WRITING
Date: / /

health including sight issues, noma (fear of missing out) phobia, muscular issues and many other. It is also linked with neural complexes that impairs human thinking and feeling sensations. A lot of problems are rising in children which are exposed to information technology excessively like the mobile phones or computers. Certain documentaries on the use of information technology provides the view that information technology affects the neurons of the brain. Thus, the expansion of information technology is a curse and bad to human health.

Then comes the environmental concerns linked with expanding information ~~xxx~~ technology. The increased use of information technology devices like mobile phones, cars, computers have led a global climate change.

Date: 11

The pollution caused by these devices and the electricity consumption is leading to climate change. Several initiatives have been taken by the world to reduce climate change including the Kyoto protocol, but human life is under a huge pressure of information technology. The use of machines is increasing the emission of green house gases and this has made the environment polluted. In a result, the natural resources are depleting. Furthermore, information technology is also responsible for exposure to undesirable content. Children, teenage and even adults are at risk of exposure to inappropriate content that will impair their mental health leading to involvement in false activities. Therefore, information technology is a curse in environmental concern.

These all aspects which were discussed earlier were a focus on information technology,

Date: / /

a curse, but information technology is a huge blessing for the human beings and ~~that~~ that will be discussed in the second part of this essay.

First comes the aspect where information technology is a blessing is that it had turned the world into a global village. It has shorten the distance of people even if they are far from each other.

The devices of information technology such as mobile phones, computers has made the communication easier for people. People can now communicate easily with the help of information technology. In the past people were supposed to make efforts for contacting each other but now everyone has mobile phones in their hands. Also, information technology has made the exchange of information easier. People can now send mails and documents to others.

Date: 11

in less than a second just because of the expansion of information technology. The devices of information technology are also handy and easier to carry giving people the feasibility. Therefore, information technology is a great blessing for the people living in this century.

Second comes the aspect of easier working conditions. The use of IT has made people's working easier than usual. The machines have replaced the hands of people, they are just an on go command operators. In addition, lesser mental effort is required because of IT. Students also have an easier access to a lot of research just with the use of one touch and a whole encyclopedia of information comes in front of them. They do not have to make a lot of mental or physical efforts in search of educational material. Also, the use

Date: / /

of IT saves alot of time. The use of robots in different fields of life has made the life of people much easier than before. In Japan more than a quarter of trillion robots are working in different fields like restravnts, hotels, hospitals and also helping in the household work. Hence, expanding IT is a benefit to people in every sphere of their life.

Thirdly, IT is a blessing because it has improved security. The use of CCTV cameras has made access to criminals more easier than before.

Security tensions are also resolved with the increased expansion of IT. Moreover, data security is also become easier through IT. It has also increased the productivity of people.

Lastly the expanding IT has enhanced the quality of life. In terms of education,

Date: / /

health and communication. All aspects of life are enhanced by the use of IT. The infrastructure is improved, the buildings and other infrastructure is made using the IT more quickly and more easily. In addition, the household devices of IT has made life efficient and easy. less time is required because of IT devices. Moreover, the health sector is very much improved since the expansion of IT. The use of pharmacology, devices for surgery, diagnosis, treatment has improved the health sector of life overall. Now, these devices have made the diagnosis easier and earlier and it is improving the overall life of people. Therefore expanding IT is a blessing not only in the effectiveness of people, but also it has improved the health conditions and overall quality of life of people.

Date: / /

To conclude, the aspects of IT where it is a curse are the ineffectiveness of people, health issues, environmental concerns. In actual, the expansion of IT in the 21st century is a great blessing whether in terms of turning the world into a global village, easier working conditions, improved security and enhanced quality of life. As a result, it is a blessing because it is lucrative for human beings in personal as well as professional life. The expanding IT is a gift. Pakistan is also a country which is working to cooperate in the further expansion of IT. The expanding IT will grow in the coming future and will give more benefits to people. The negative side of expanding IT is noticable but the positive side is also very prominent for the progress.

Date: / /

and feasibility of human beings.
As 52% of companies worldwide reported the increase in worker productivity by the use of IT.
As Reggio said, "it's not that we use technology, we live technology."
