Topic: Importance of Urban green spaces

The green spaces in the urban areas have **profound** vast impacts on the human inhabitants and wildlife.

They prove essential habitat for the animals and a source of escape

and peace from the rushed city (lives). Life works and **for human beings** <sup>such</sup> the shared

public spaces promote a sense of community and belonging, and allow cultural activities to take place. But

difficulties lie in creating a balance between urbanization and environmentalism. It has become

a mutual duty of all to create such green spaces that sustain human and environmental health.

As the cities continuously evolve, it is important to adapt and **create** ways that promote the

coexistence of human development and environment protection

Idea and grammar are generally ok.
