

Education: The future of learning
- Is technology the key?

Outline

Introduction

Thesis statement:

While technology is transforming learning, critical thinking and emotional intelligence remain essential; a balanced and integrated approach of both technology and education, which combines human-centered skills, offers most effective approach to education.

Plz rephrase it
It does not make any
sense

Evolution of learning system

- Traditional learning system

- Outdated methods of teaching
- No use of teaching aid
- Accessibility is limited to certain individuals.
- High cost with less efficient learning

Plz send your paragraphs

too

- Modern education system/learning system

- Efficient classrooms with modern technology - smart boards, VR, AR.
- E-learning platforms making learning globally accessible - Coursera, Youtube

- Personalized learning — adaptive to individual pace of learning.
- Breaking the barriers for specially abled students — text-to-speech, screen reader, captions
- Online classrooms making learning accessible globally — Zoom, Google classrooms, MCCOS etc.
- Adaptability with the circumstances via technology — Covid-19

Challenges to tech-based learning

- Digital literacy is one of the big challenges.
- Privacy has nothing to do with learning plz check relevancy
- Attack to the Privacy
- Limited interactive environment

Suggestions

- skill development programs
- Govt initiative to improve digital literacy — IT city
- Privacy protection — laws and regulations.

Government initiatives

- A hybrid approach for effective learning -

Conclusion
