

CLIMATE CHANGE in PAKISTAN

CAUSES & CONSEQUENCES

BRAIN STORM ~~Outline~~

CAUSES

- ① Cutting down of trees
- ② Not growing more trees
- ③ Burning of forests (Deforestation)
- ④ Food for Herbivores
- ⑤ ~~Rains~~ continuous rains
- ⑥ Global warming turning to global boiling
- ⑦ Pollution ↓
- ⑧ Lack of proper infrastructure

CONSEQUENCES

- ① Health issues
- ② Environmental issues
- ③ Economic depletion
- ④ Livestock affected
- ⑤ Losing important resources
- ⑥ Tourism affected

OUTLINE

Causes

- ① Pollution
- ② Deforestation
Do not cut a tree even in case of war. (Hadith)
- ③ Excessive Rains because of glacier melting
- ④ Lacking proper infrastructure

Consequences

- ① Health Hazards
- ② Livestock affected
- ③ Environment affected
- ④ Economy depletion
- ⑤ Losing Agricultural land & crops
- ⑥ Inavailability of basic food (grains / rice)
- ⑦ Tourism affected
- ⑧ Global warming changed to global boiling

Solutions

- ① Reforms in policy making
- ② Strict actions to implement those policies
- ③ Changes in infrastructure
- ④ Keen observation on policies of developed nations
- ⑤ Active service of minister of climate change

Introduutory Paragraph

Picture your favourite vacation spot. Now imagine it wiped out by extreme weather. Climate change is not just a future problem, it's happening now. Climate change has been a life threatening issue globally. The developed countries have surpassed. However, Pakistan remains at 5th position from 1998 to 2018 affecting almost 33 million people from extreme climates. The main cause for this extreme weather and climate change is deforestation, glacier melting, pollution and lacking infrastructure. If these issues are resolved by the climate minister by ~~observing~~ observing policies of developed countries and bringing suitable reforms; Pakistan can also flourish and lead to prosperity.
