

PRECIS 2024

Title: Merits of and need to preserve Green Spaces.

In busy cities, green spaces are a place of relaxation. They preserve environment by serving as a home to wildlife. Not only that, they also develop community bonds. Different people gather together for different activities of enjoyment. The most important role they perform is improving the quality of air by fighting against harmful environmental effects. Moreover, they are also great place to visit to refresh one's mental health. Nonetheless, it has become difficult to preserve them keeping in mind the growing urbanization. There should be an effort to preserve these green spaces ~~with growing~~ ~~urbanization~~ so that a balance could be maintained between human and environmental health.
