

"CLIMATE CHANGE: CAUSES, EFFECTS, AND SOLUTIONS"

OUTLINE:

1- INTRODUCTION

2. Causes of Climate Change

- 2.1. Generating power by burning fossil fuels
- 2.2. Emissions from ~~Generating~~ manufacturing goods and industries
- 2.3. Cutting down forests for daily use
- 2.4. Combustion of petroleum based products for transportation
- 2.5. Powering buildings drawn on coal and natural gas for heating and cooling
- 2.6. Consumption of too much commodities by the citizens
- 2.7. Ampel use of Energy for food production.

3. Effects of Climate Change

- 3.1. Climate change leads to hotter temperatures
- 3.2. Climate change increased the rate of severe storms
- 3.3. It can enhance the risk of agricultural drought
- 3.4. Ocean levels raised which is a warning for the world.

3.5. Climate Change paving way for losing biodiversity of species.

3.6. It upsurges hunger and poor nutrition

3.7. Climate change is the biggest health threat to the humanity.

3.8. Climate Change increases poverty and displacement

4. Solutions to Overcome Climate Change

4.1. Maximum use of renewable energy.

4.2. Better forestry management and sustainable agriculture.

4.3. Advancing eco-friendly buildings

4.4. Ending Reliance on fossil fuels.

4.5. Reducing CO₂ Emissions

4.6. Promoting feasible transportation

4.7. Using Electric Vehicle Batteries

4.8. Planting more and more trees

4.9. Greater Energy Efficiency.

5. CONCLUSION.
